Sheth L.U.J College of Arts & Sir M.V. College of Science and Commerce
Department of Information Technology (B.Sc.I.T Semester V)
Artificial Intelligence Application Development Practical
Module - II
Practical – IV

Roll No.:T054	Name:Priti Yadav
Class:TYIT	Batch:2
Date of Assignment: 09/09/26	Date/Time of Submission: 09/09/26

4.Issue Management.

A. Create issues under an Epic.

Step 1: Open the Full Stack Project

1. Open Jira.
2. Open your Full Stack Project.
3. Click Backlog.

Why: The Backlog is used to create and manage the work items of the project.

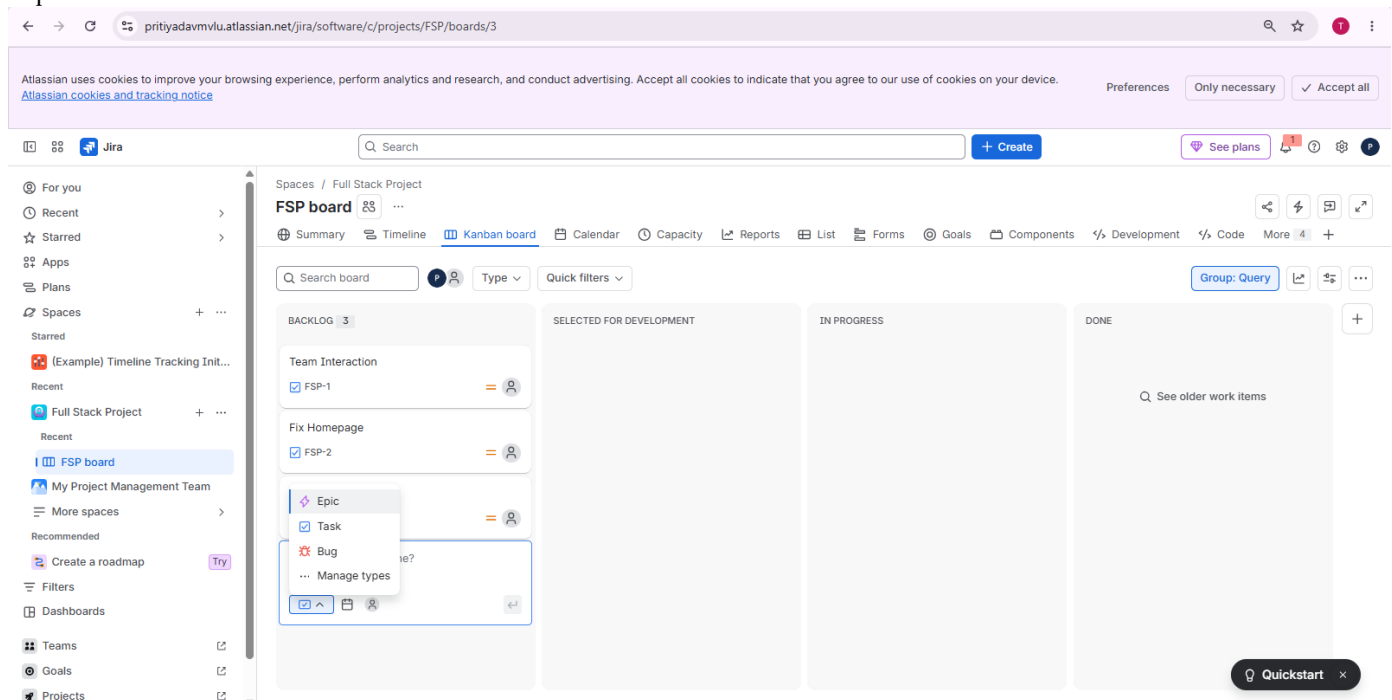

Step 2: Create the Epic

1. Click Create.
2. In Issue Type, select Epic.
3. Enter the Epic name:Online Shopping Website Development
4. Enter the description:

Develop and manage the main features of an online shopping website, including user login, shopping cart, and order management.

5. Click Create.

Why: An Epic represents a large body of work. It is used to group related issues belonging to the same major feature or project requirement.

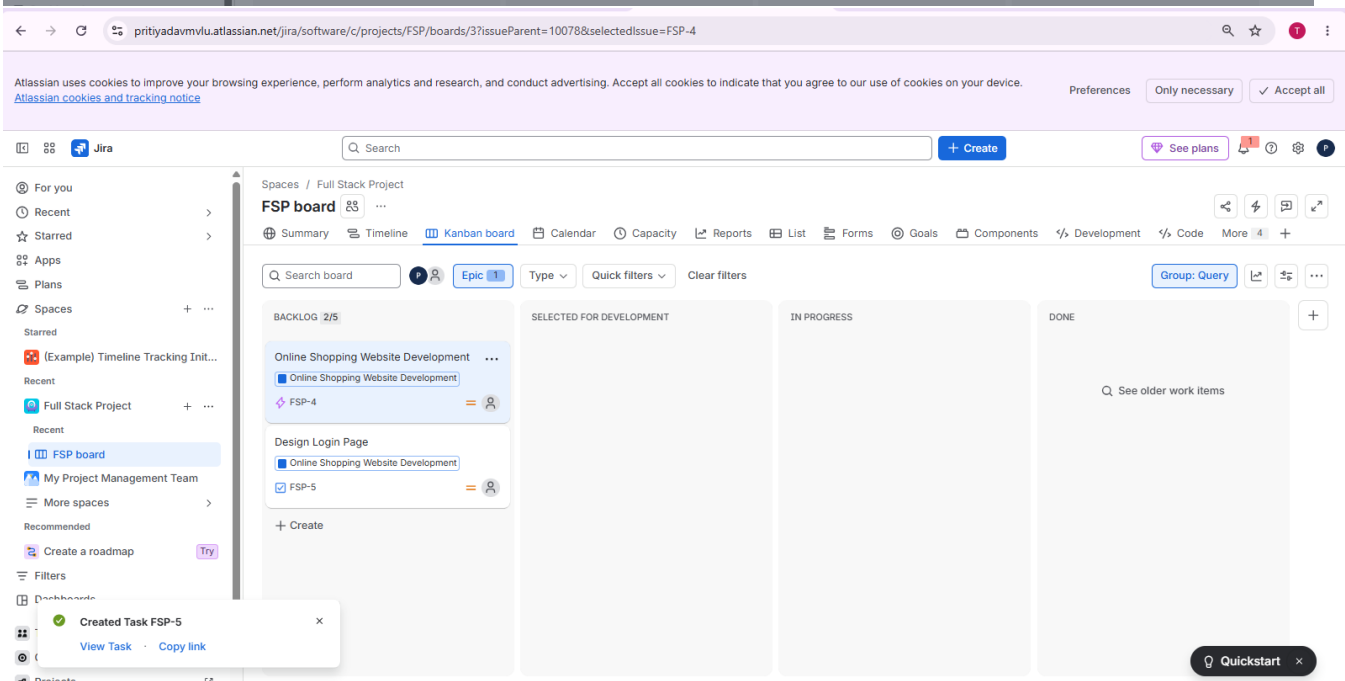

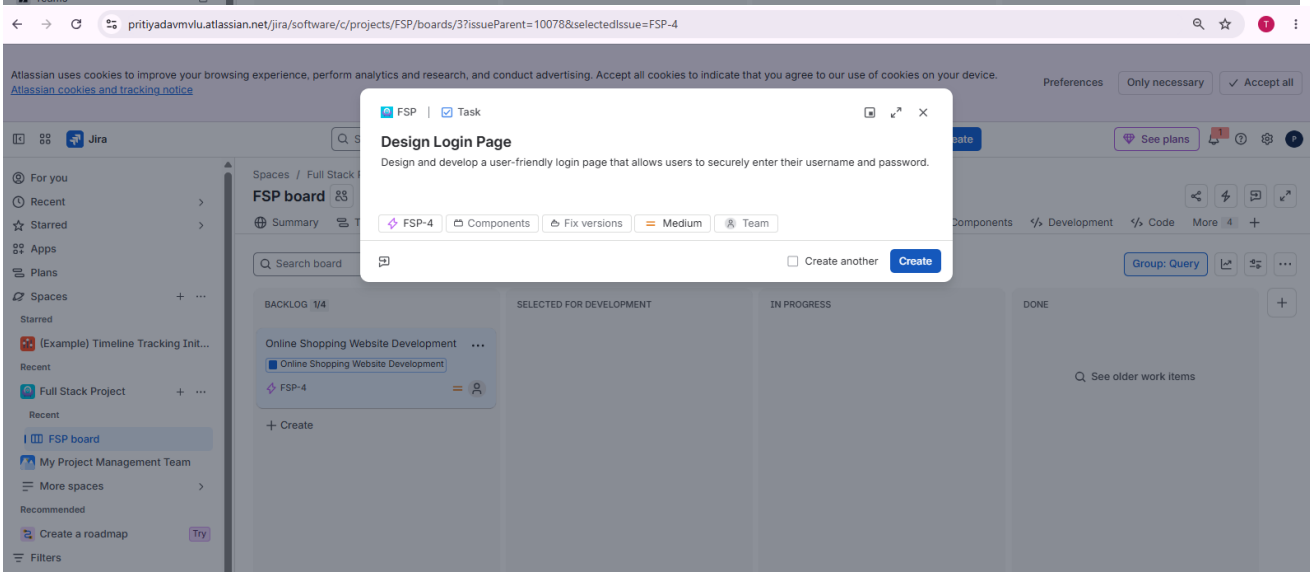

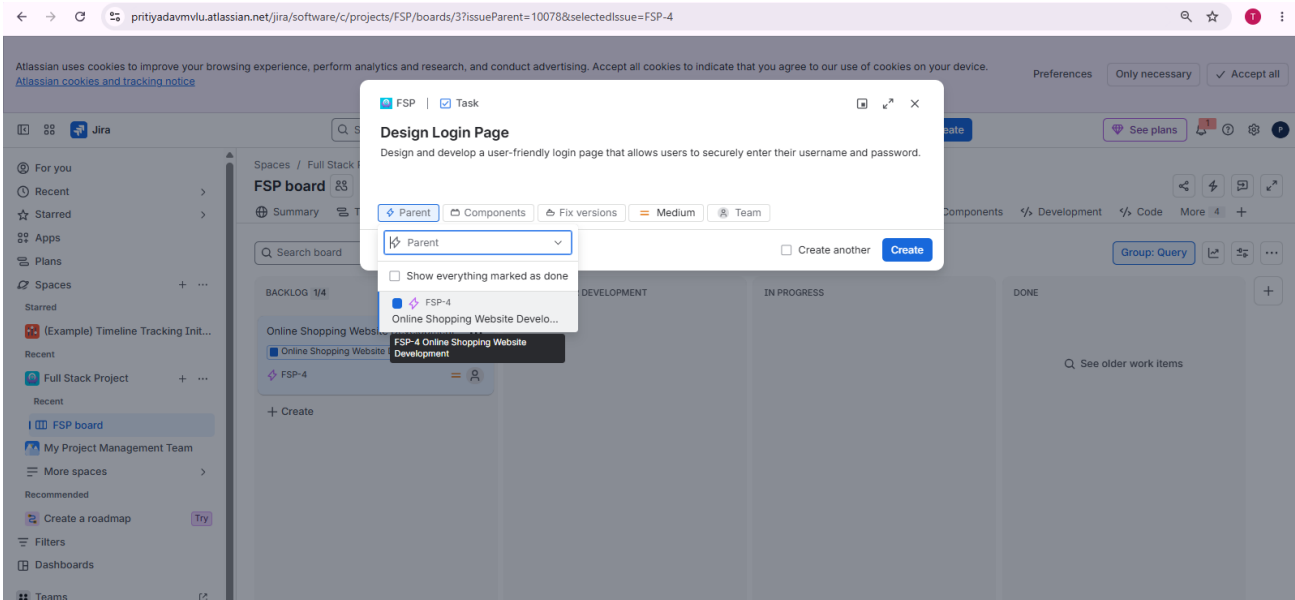

Step 3: Create the First Issue

1. Click Create.
2. In Issue Type, select Task.
3. In Summary, enter:Design Login Page
4. In Description, enter:

Design and develop a user-friendly login page that allows users to securely enter their username and password.

5. Find the Parent or Epic field.
6. Select:Online Shopping Website Development
7. Click Create.

Why: The Task represents a specific piece of work. Linking it to the Epic keeps the task associated with the larger project activity.

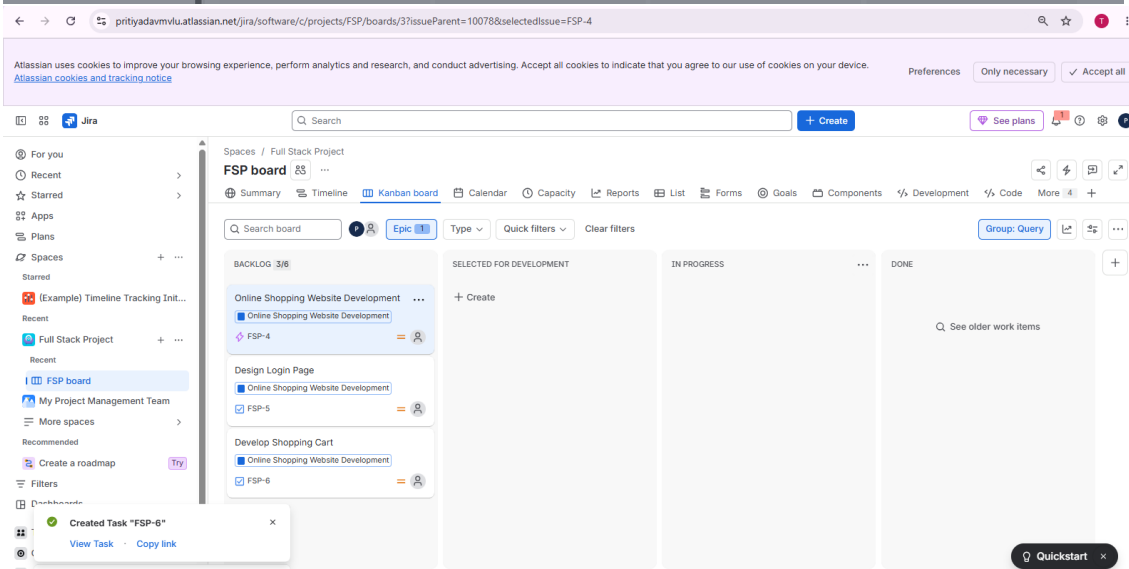

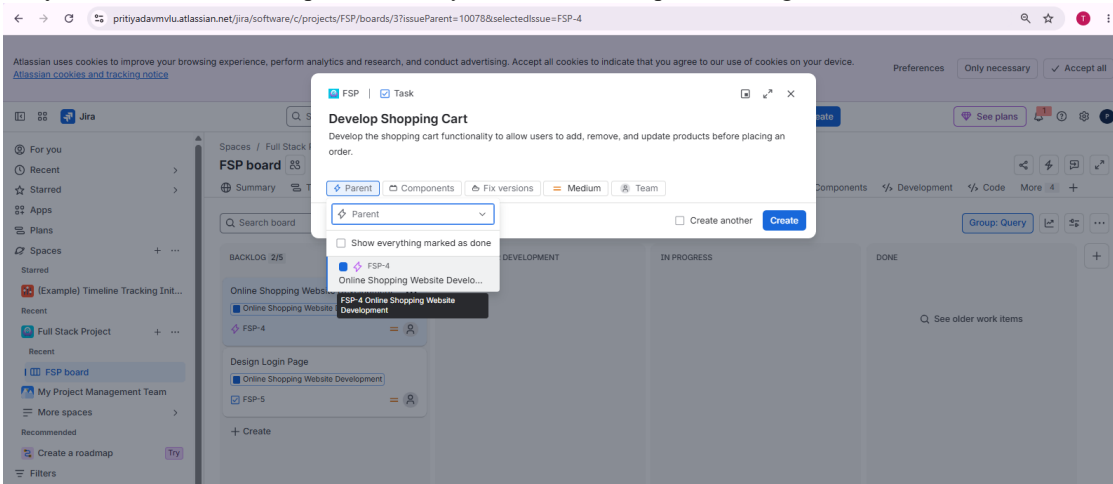

Step 4: Create the Second Issue

1. Click Create again.
2. Select Task as the Issue Type.
3. In Summary, enter: Develop Shopping Cart
4. In Description, enter:

Develop the shopping cart functionality to allow users to add, remove, and update products before placing an order.

5. In the Parent/Epic field, select:Online Shopping Website Development
6. Click Create.

Why: This creates another specific activity under the same Epic, allowing the work to be divided and tracked separately.

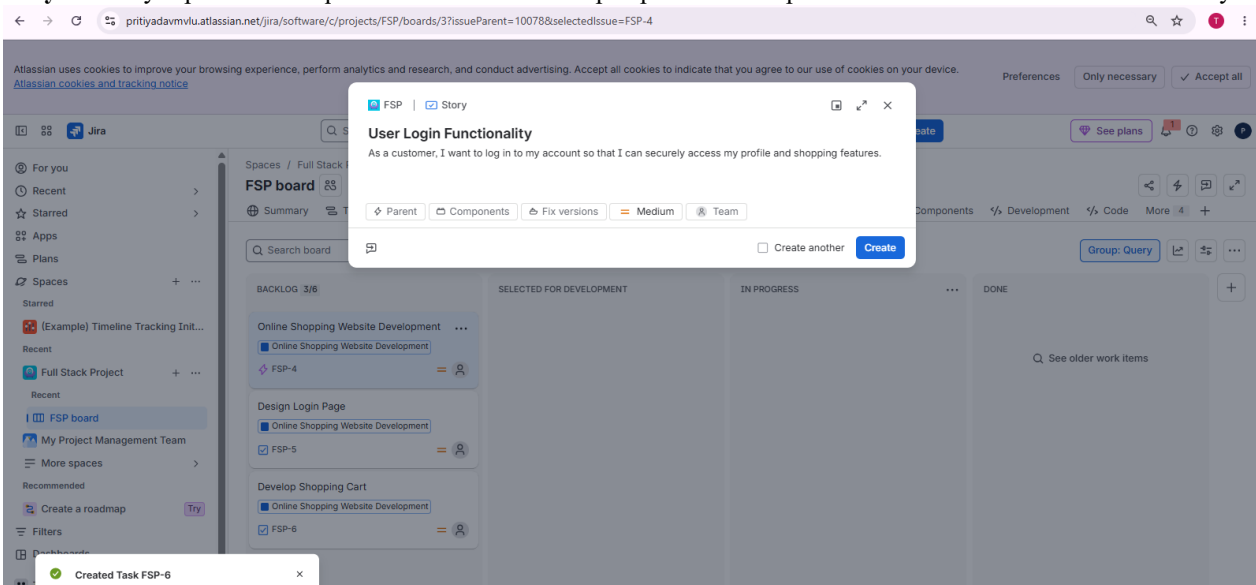

Step 5: Create the Third Issue

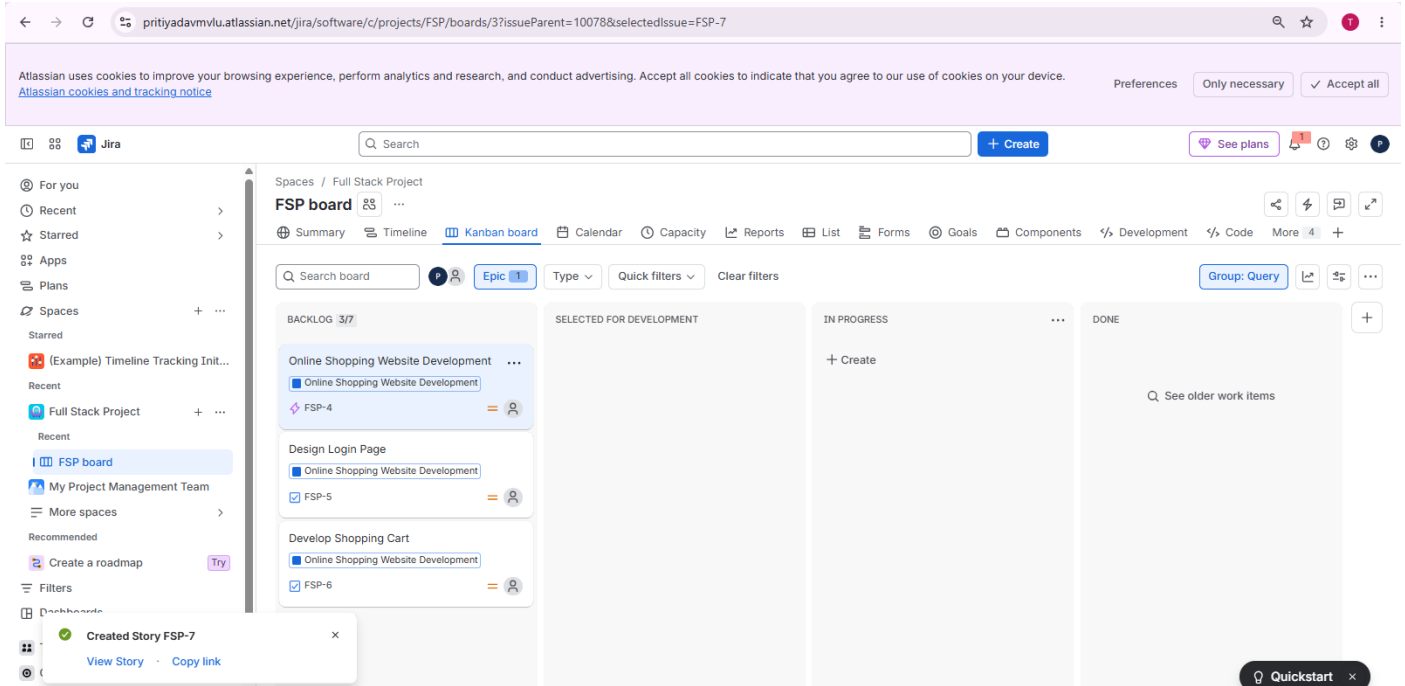

1. Click Create.
2. Select Story as the Issue Type.
3. In Summary, enter:User Login Functionality
4. In Description, enter:

As a customer, I want to log in to my account so that I can securely access my profile and shopping features.

5. In Parent/Epic, select:Online Shopping Website Development
6. Click Create.

Why: A Story represents a requirement from the user's perspective. It helps the team understand what functionality the user needs.

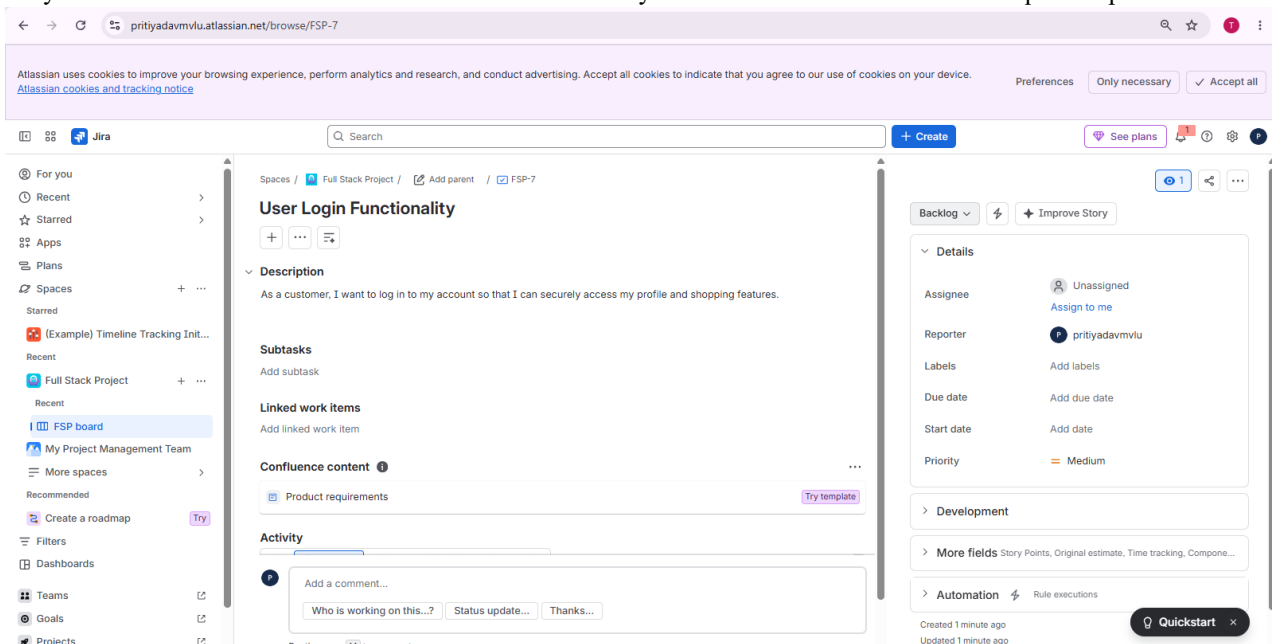

Step 6: Verify the Issues

Check the Epic and verify that the issues are linked to it:
Online Shopping Website Development

- Task – Design Login Page
- Task – Develop Shopping Cart
- Story – User Login Functionality

Why: Verification ensures that all issues have been correctly created and associated with the required Epic.

Result:

The Epic “Online Shopping Website Development” and the required Task and Story issues were successfully created and linked to the Epic.

B. Assign issues to users and set Priority & Due Date.

Step 1: Open the Issue

1. Go to Backlog.
2. Find User login Functionality.
3. Click on the issue to open it.

Why: We open the issue because its Assignee, Priority, and Due Date need to be configured.

Step 2: Assign the Issue to a User

1. Find the Assignee field.
2. Click Assignee.
3. Select one of your previously added group members.

4. Save/Update the issue if required.

Why: The Assignee identifies the team member responsible for completing the issue.

Step 3: Set the Priority

1. Find the Priority field.
2. Click the Priority dropdown.
3. Select High.
4. Save/Update if required.

Why: Priority indicates the importance or urgency of the issue and helps the team decide which work should be completed first.

Step 4: Set the Due Date

1. Find the Due Date field.
2. Click the date field.
3. Select 22 September 2026 as the due date.
4. Save/Update the issue.

Why: The Due Date specifies when the assigned work is expected to be completed and helps the team manage deadline

The screenshot shows the Jira issue page for 'User Login Functionality' (FSP-7). The left sidebar contains navigation options like 'For you', 'Recent', 'Starred', 'Apps', 'Plans', 'Spaces', 'Starred', 'Recent', 'Full Stack Project', 'My Project Management Team', 'More spaces', 'Recommended', 'Create a roadmap', 'Filters', 'Dashboards', 'Teams', 'Goals', 'Projects', and 'Customize sidebar'. The main content area shows the issue details: 'User Login Functionality' with a description, subtasks, linked work items, and activity. The right sidebar shows the 'Details' section with fields for Assignee (Khushi Patel), Reporter (pritiyadavmvlu), Labels, Due date (9/22/2026), Start date, Priority (Highest), and Development section. A 'Quickstart' button is visible at the bottom right.

Step 5: Verify the Issue

Check the Design Login Page issue and confirm:

The screenshot shows an email notification from Jira. The header includes the Jira logo and the text '[JIRA] pritiyadavmvlu assigned FSP-7 to you'. The body of the email states: 'pritiyadavmvlu assigned this work item to you'. Below this, it shows the issue details: 'Full Stack Project / FSP-7', 'User Login Functionality', and the assignee change: 'Assignee: pritiyadavmvlu → Khushi Patel'. A 'View work item' button is provided. At the bottom, there are links for 'Manage Notifications', 'Give feedback', and 'Privacy Policy', along with 'Reply' and 'Forward' buttons.

Result:

The “Design Login Page” issue was successfully assigned to a user, and its Priority and Due Date were successfully set.

Conclusion:

Thus, issues were successfully created under an Epic, assigned to users, and configured with appropriate Priority and Due Date in Jira.
