Practical – XI

Roll No.:T054	Name:Priti Yadav
Class:TYIT	Batch:2
Date of Assignment: 26/09/26	Date/Time of Submission: 26/09/26

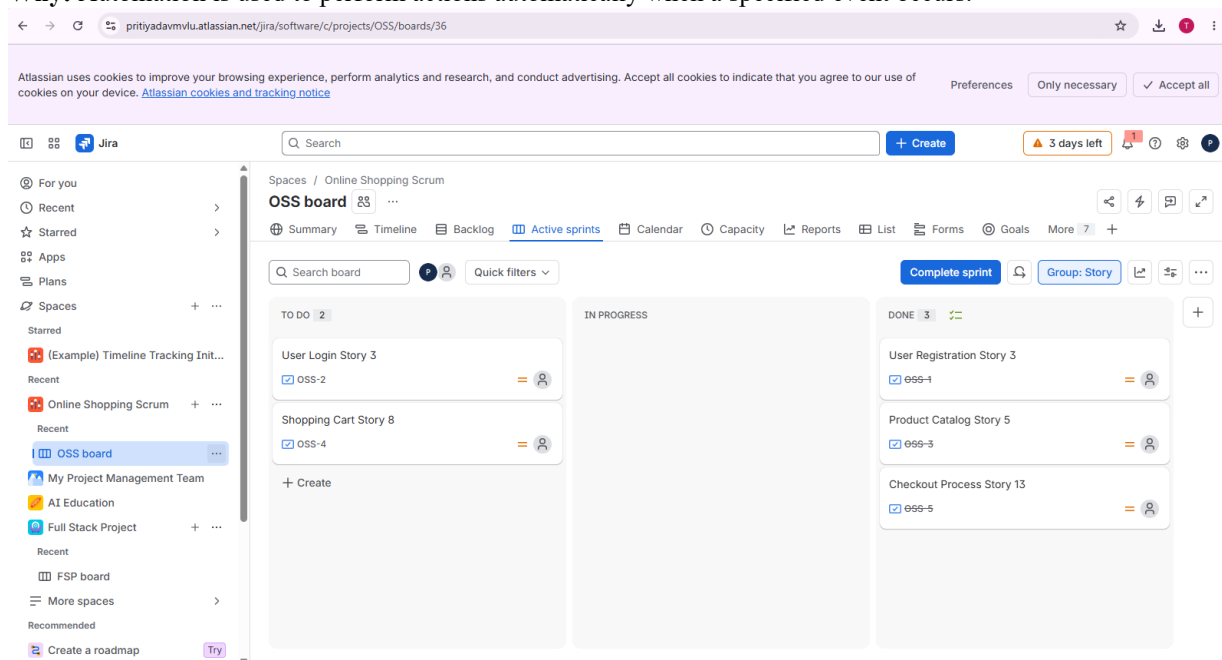

11. Jira Automation.

A. Create an Automation Rule (Trigger → Condition → Action).

Step 1: Open Automation

1. Open the Online Shopping Scrum project.
2. Go to Space settings.
3. Click Automation.

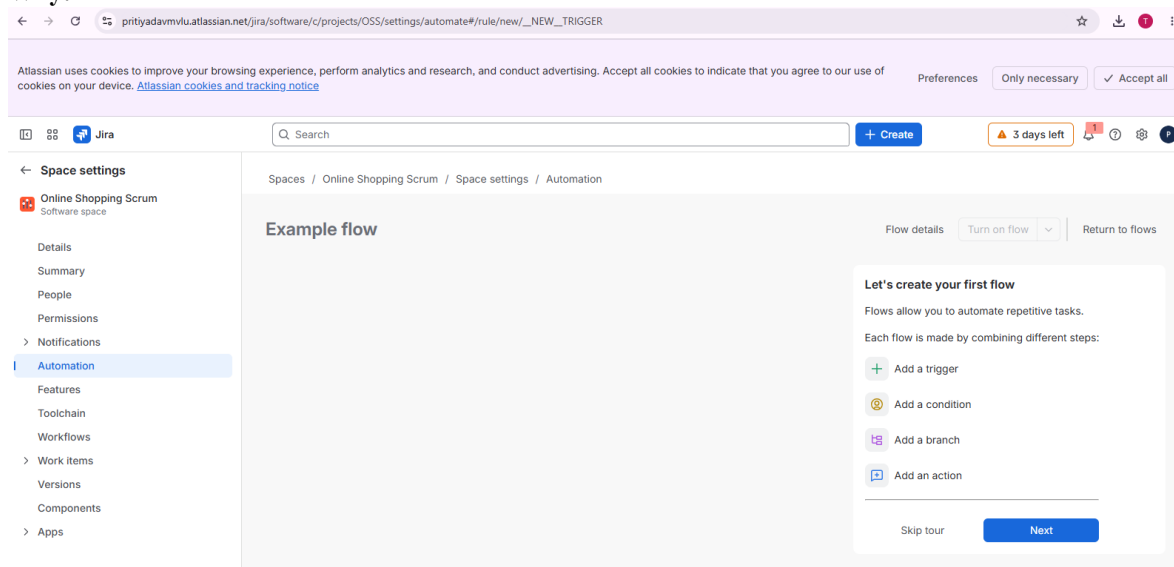

Why: Automation is used to perform actions automatically when a specified event occurs.

Step 2: Create Automation

1. Click Create automation.
2. Select Create / Get started.
3. An Untitled flow will appear.

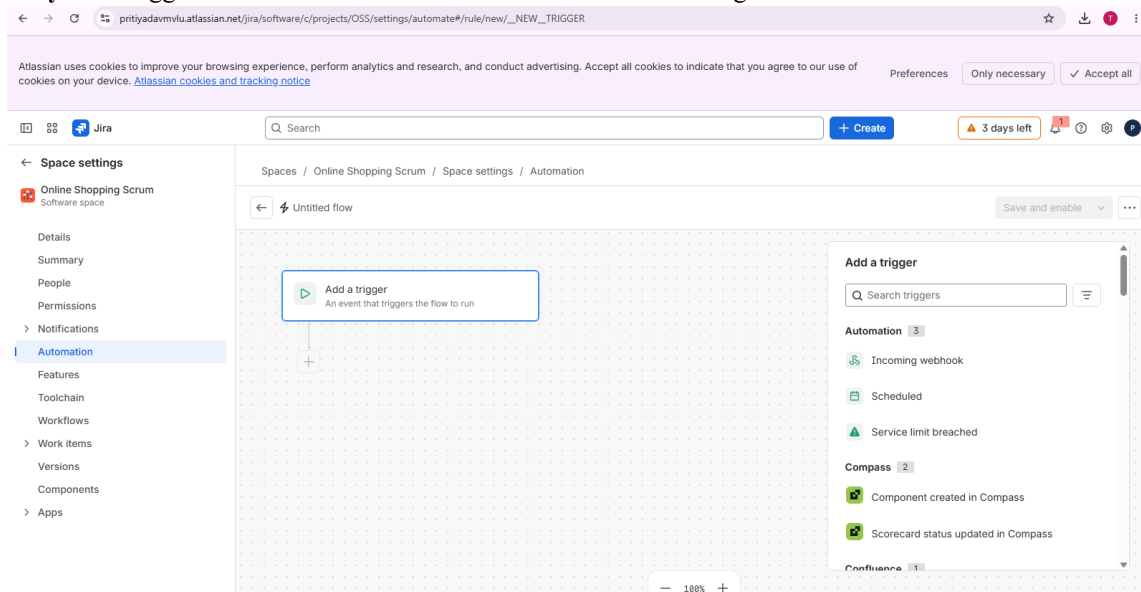

Why: This starts the creation of a new automation rule.

Step 3: Add Trigger

1. Click Add a trigger.
2. Search for Field value changed.
3. Select Field value changed.

Why: The trigger starts the automation when the selected field changes.

Step 4: Configure Trigger

Set the trigger as:

- Field: Status
 - Change type: Any changes to the field value
 - For: All work item operations
4. Click Save/Add.

Why: This makes the automation start whenever the Status of a work item changes.

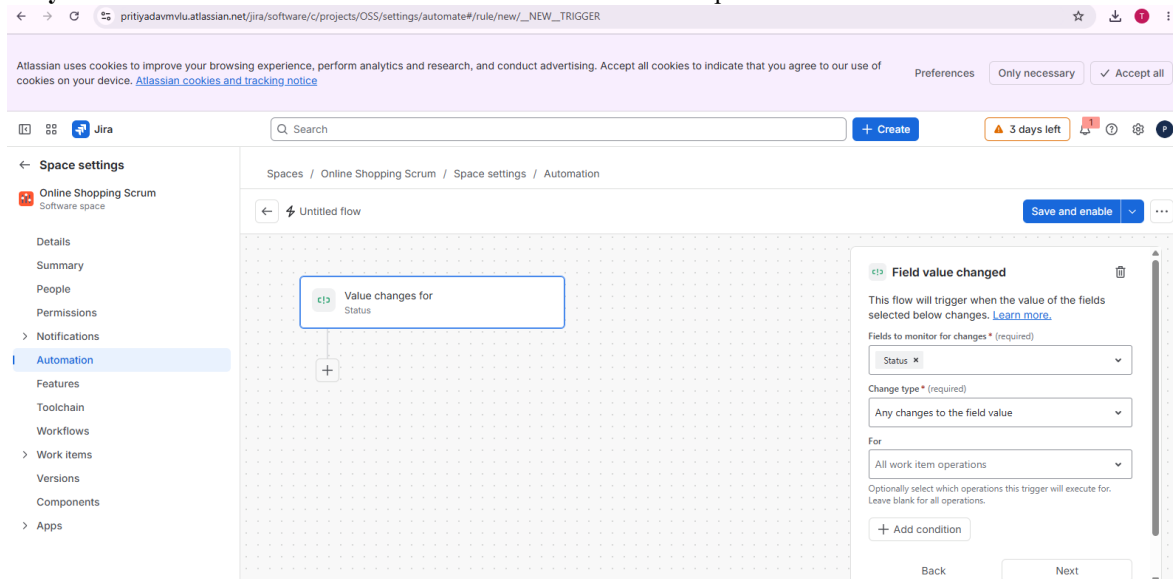

Result : An automation rule was successfully created with a Field Value Changed trigger.

B. Configure rule (e.g., When issue is moved to Done → send email / auto-assign).

Step 1: Add Condition

1. Click Add condition.
2. Select Work item field condition.

Why: A condition controls when the automation action should be performed.

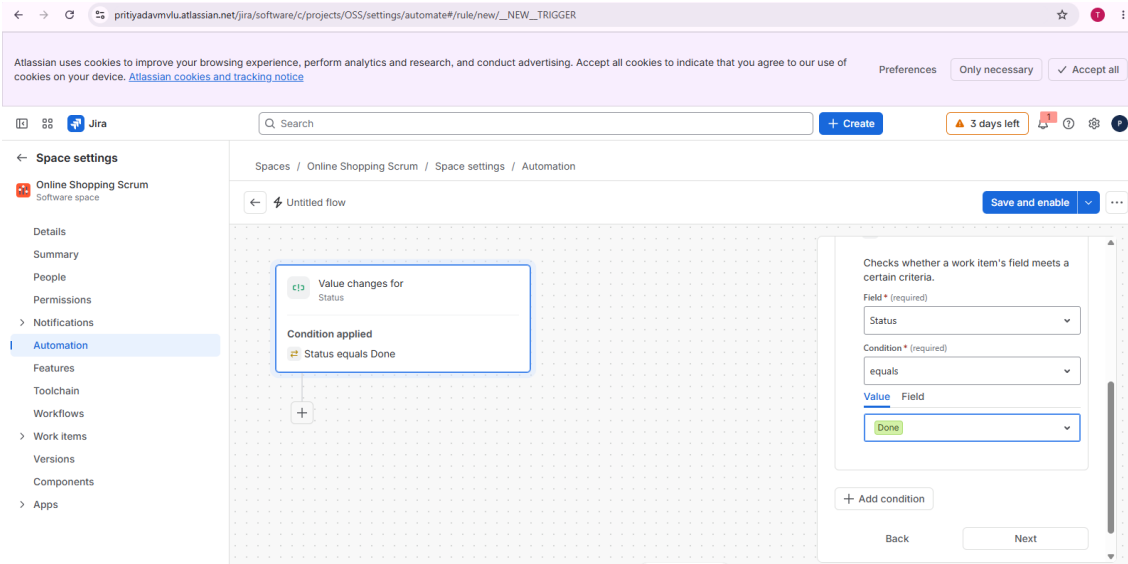

Step 2: Configure Condition

Set:

- Field: Status
 - Condition: Equals
 - Value: Done
3. Click Save/Add.

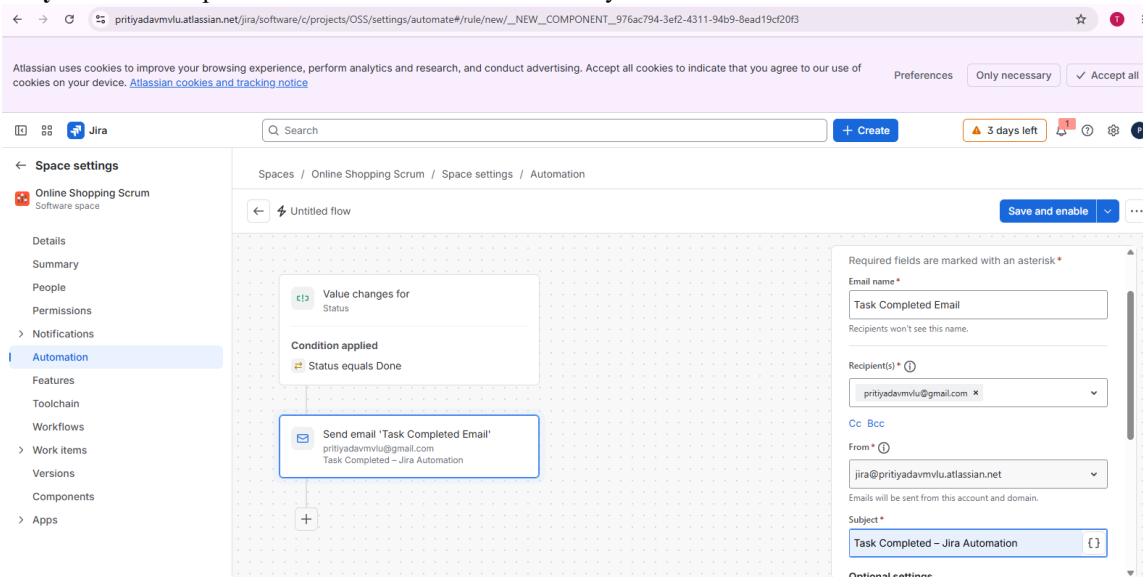

Why: The automation will continue only when the issue's Status becomes Done.

Step 3: Add Action

1. Click Add action.
2. Search for Send customized email.
3. Select Send customized email.

Why: The action specifies what Jira should automatically do after the condition is satisfied.

Step 4: Configure Email

Enter: Email name: Task Completed Email

Recipient(s): pritiyadavmvlu@gmail.com

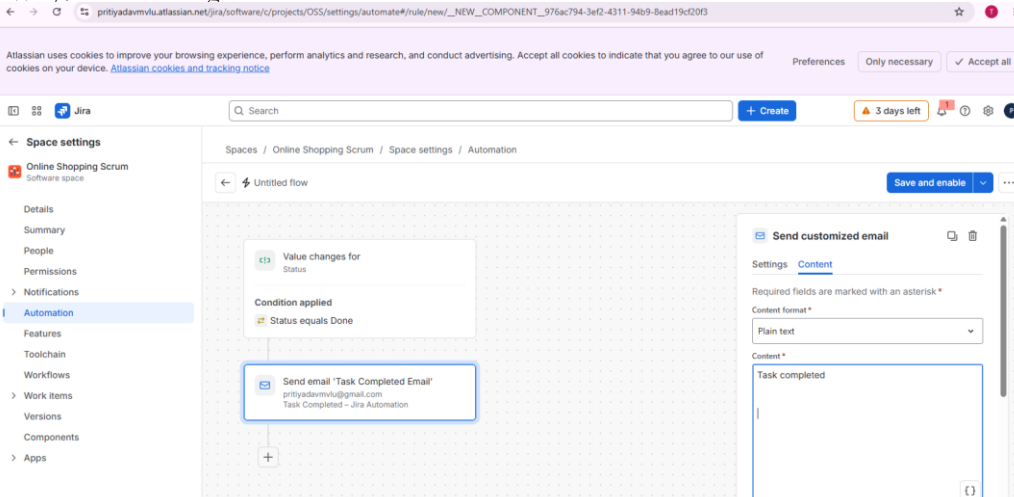

From: Leave the Jira address selected.

Subject: Task Completed – Jira Automation

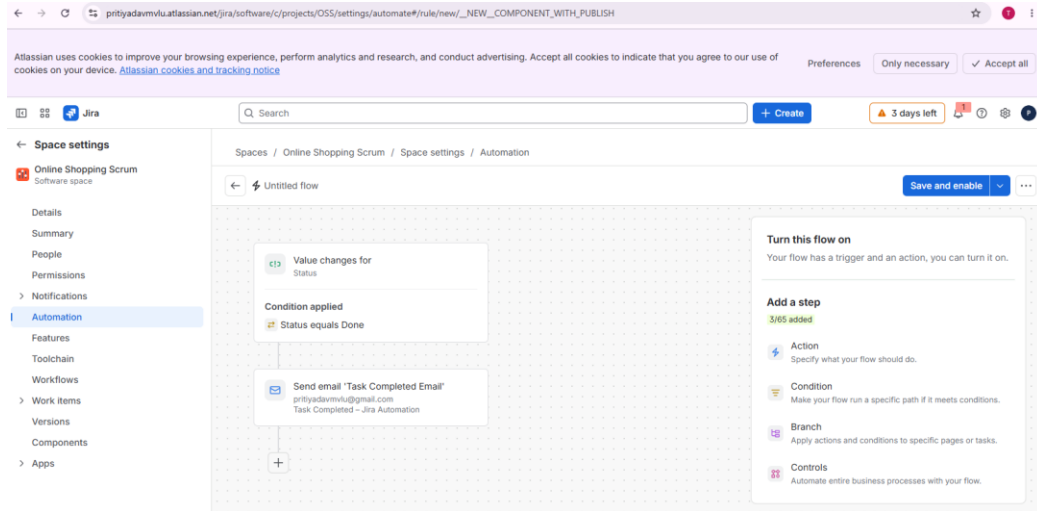

Message/Content: The task has been completed and its status has been changed to Done.

Leave optional fields such as From name, Reply to name, and Reply to address empty unless required.

Why: These settings define the automatic email that will be sent when the rule runs.

Step 5: Check the Flow

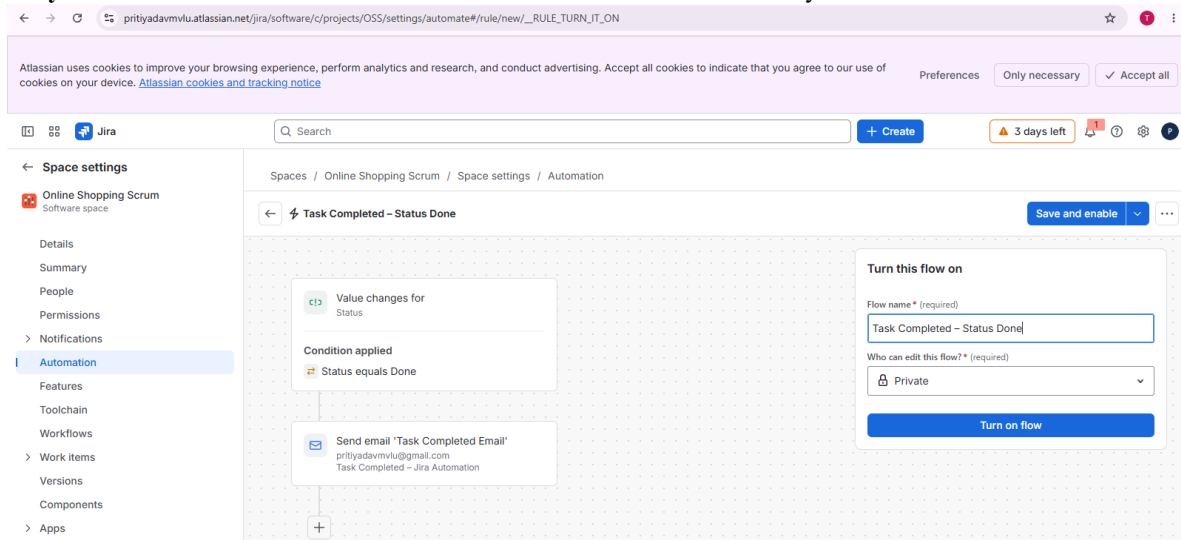

Result : A Status = Done condition and customized email action were successfully added to the automation rule.

C. Test and enable automation rule.

Step 1: Save and Enable

1. Check the complete automation flow. And Click Save and enable
2. If Jira asks for a flow name, enter: Task Completed – Status Done
3. Click Turn on flow.

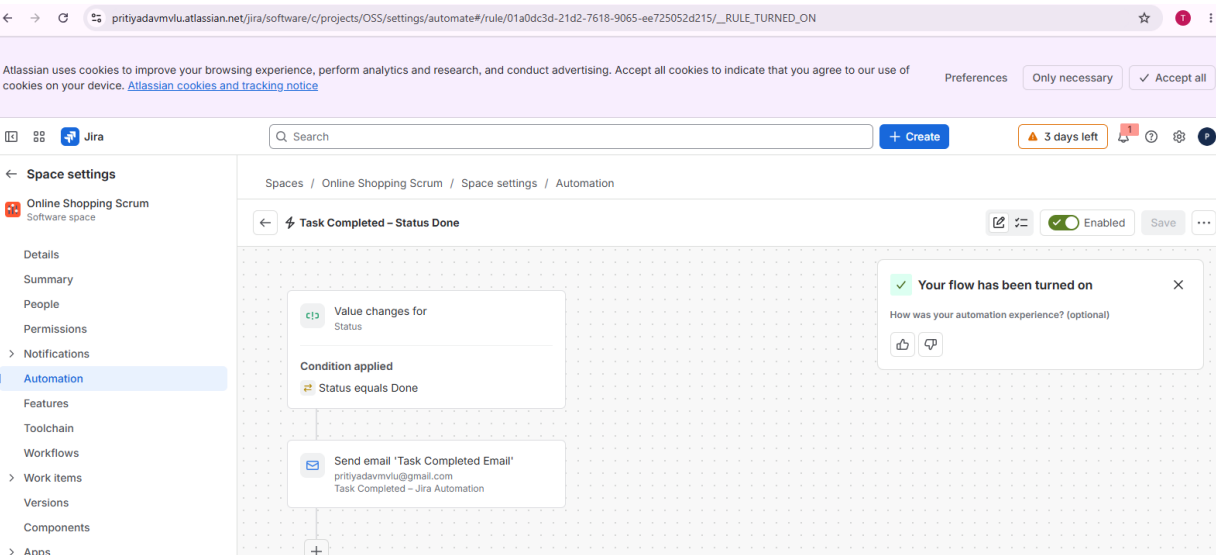

Why: This activates the automation rule so Jira can execute it automatically.

Step 2: Open the Scrum Board

1. Go to Online Shopping Scrum.
2. Open OSS board.
3. Click Active sprints.

Why: We need a work item whose status can be changed to test the automation.

Step 3: Select a Test Issue

Use:User Login Story 3 (OSS-2)

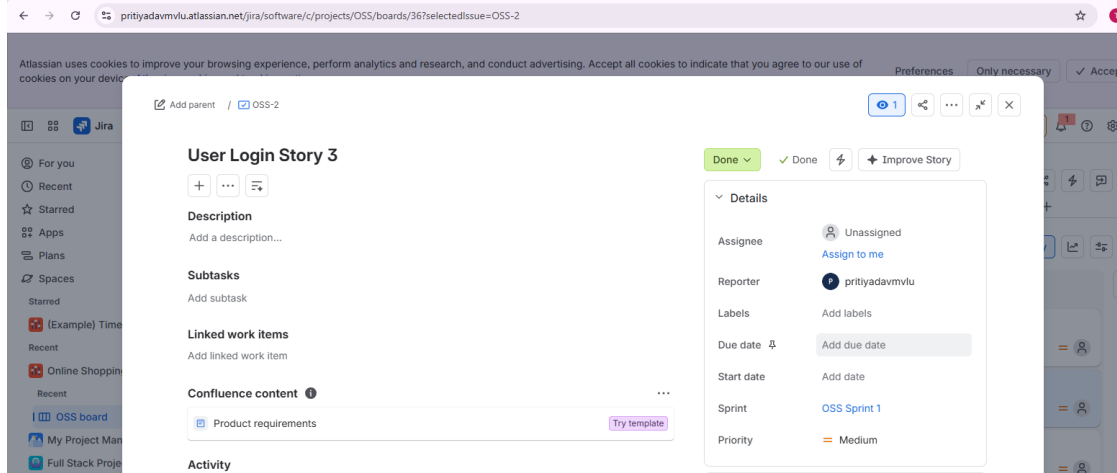

1. Open the issue.

Why: This issue will be used to test the automation.

Step 4: Change Status to Done

1. Change the issue's status to Done.
2. You can either:
 - Open the issue and select Done, or
 - Drag the issue from TO DO to DONE on the board.

Why: Changing the Status triggers the automation, and because the new status is Done, the condition is satisfied.

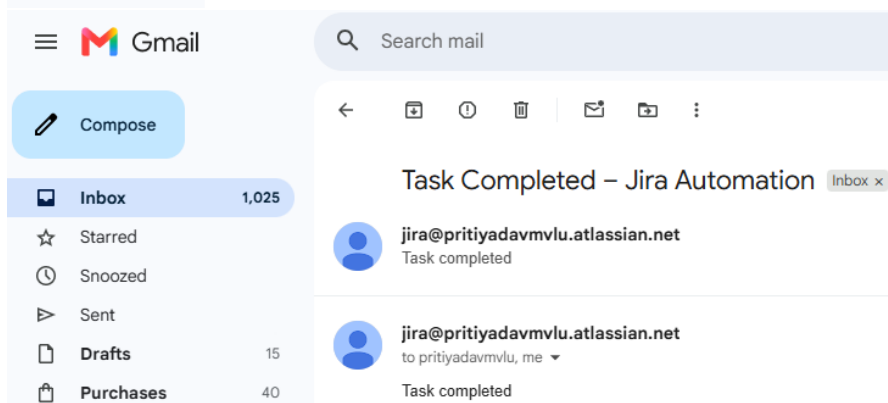

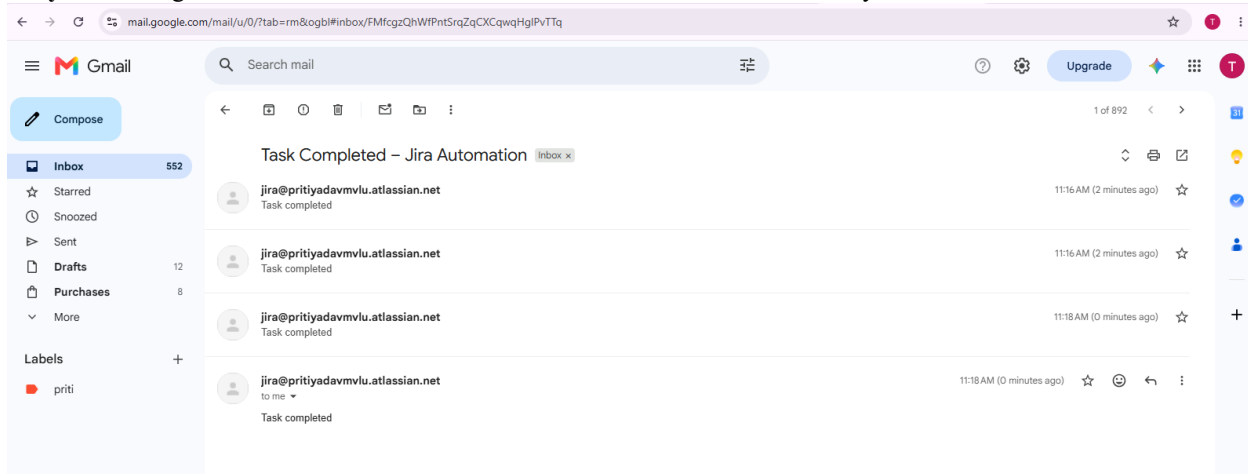

Step 5: Check the Email

1. Open the email account entered under Recipient(s).
2. Check the Inbox.
3. Look for:

Subject:Task Completed – Jira Automation

4. Open the email and verify the message.

Why: Receiving the email confirms that the automation rule worked successfully.

Result :

Thus, a Jira automation rule was successfully created using a Status change trigger, Status = Done condition, and customized email action. The automation was enabled and successfully tested by changing an issue status to Done.
