Artificial Intelligence Application Development Practical
Module - II
Practical –V

Roll No.:T054	Name:Priti Yadav
Class:TYIT	Batch:2
Date of Assignment: 09/09/26	Date/Time of Submission: 09/09/26

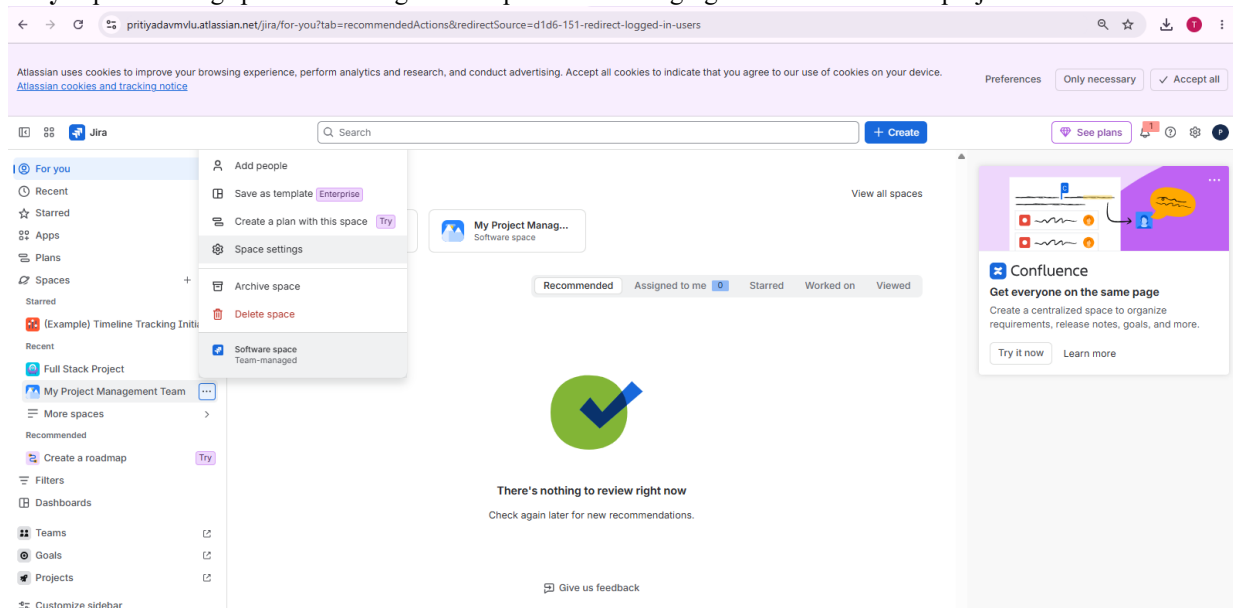

5. Workflow Customization.

A. Design a custom workflow.

Step 1: Open Space Settings

1. Open your Full Stack Project in Jira.
2. Click Space settings.
3. Select Workflows.

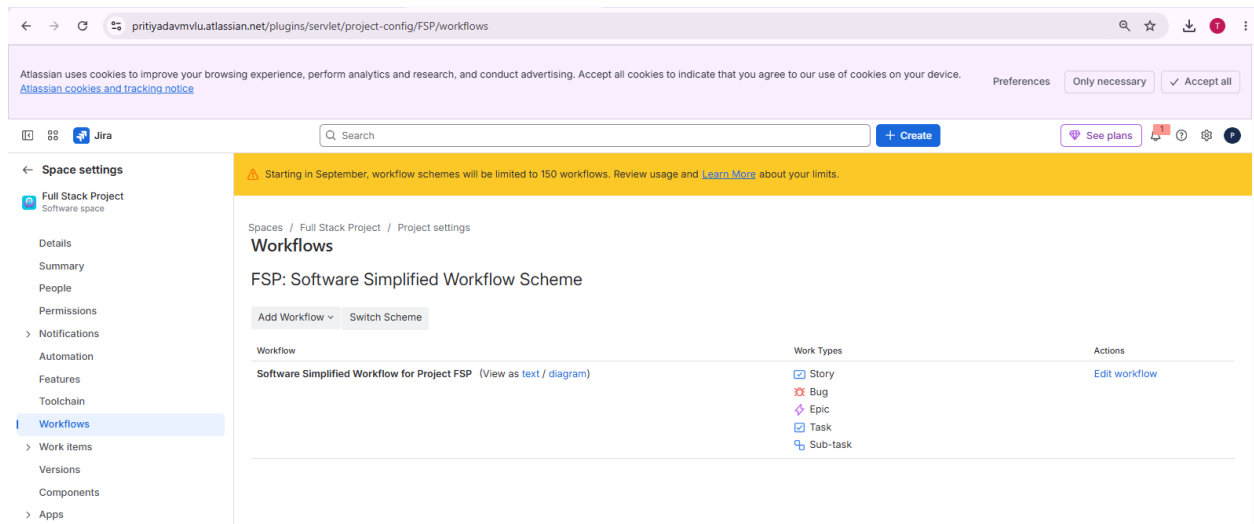

Why: Space Settings provides configuration options for managing the workflow of the project.

Step 2: Add an Existing Workflow

1. On the Workflows page, locate Add workflow.
2. Select Add Existing Workflow.

Why: Jira allows an existing workflow to be added to the project instead of creating every workflow element from the beginning.

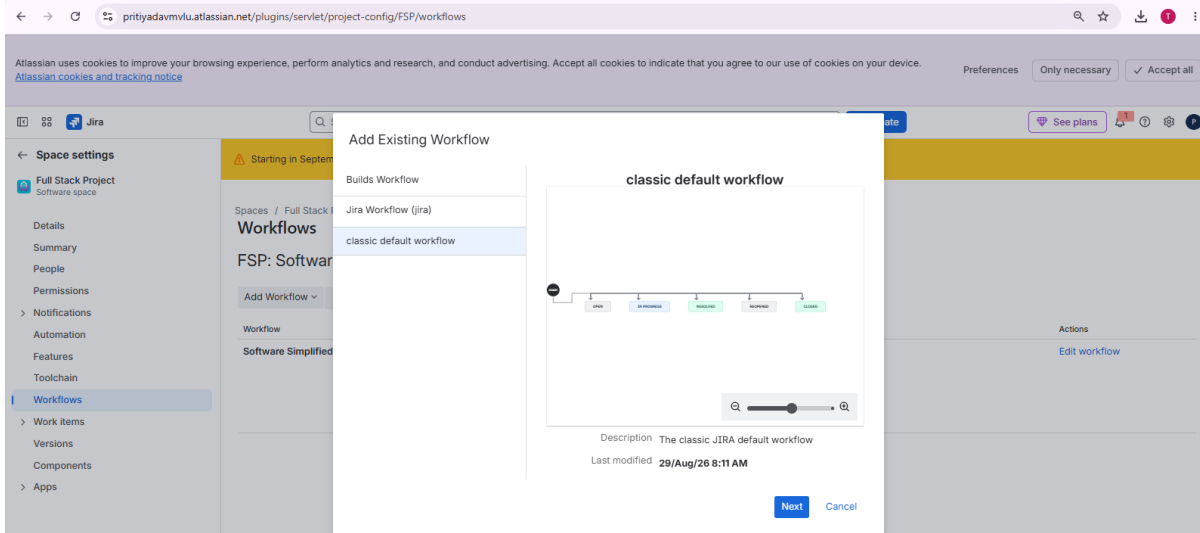

Step 3: Select the Workflow

1. A window named Add Existing Workflow will appear.
2. Select Classic default workflow or the required workflow from the list.

3. Click Next.

Why: The selected workflow provides the basic statuses and workflow structure that will be used for managing issues.

Step 4: Assign Issue Types

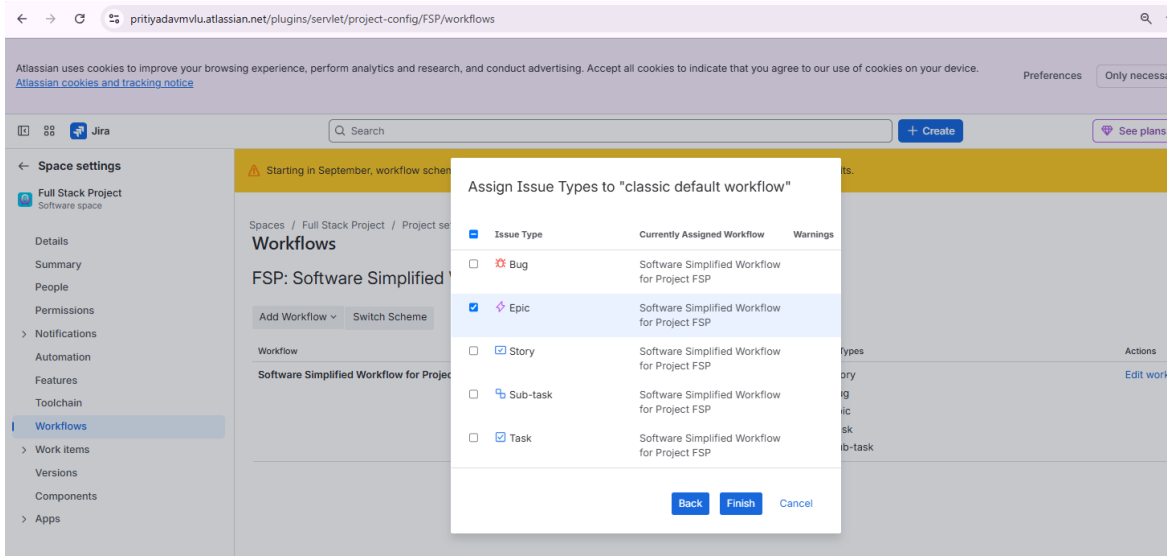

1. The Assign Issue Types to workflow screen will appear.
2. Select the required issue types, such as: Epic
3. Click Next.

Why: Assigning issue types determines which types of Jira issues will use the selected workflow.

Step 5: Finish Adding the Workflow

1. Review the workflow configuration.
2. Click Finish.

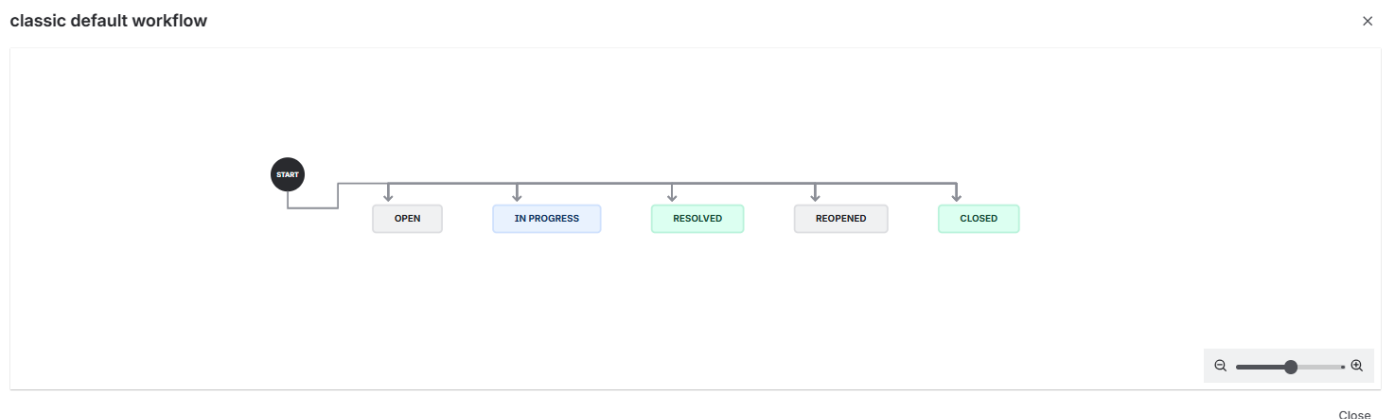

Why: Clicking Finish completes the process of adding the workflow to the project.

Step 6: Open the Workflow Diagram

1. In the Workflows page, locate the added workflow.
2. Click Diagram.

Why: The workflow diagram provides a visual representation of the statuses and the flow between them.

Workflows DRAFT

FSP: Software Simplified Workflow Scheme

[Add Workflow](#) [Switch Scheme](#)

Workflow	Work Types	Actions
Software Simplified Workflow for Project FSP (View as text / diagram)	☒ Story ☒ Bug ☒ Task ☒ Sub-task (Assign)	Edit workflow Remove workflow
classic default workflow (View as text / diagram)	☒ Epic (Assign)	Edit workflow Remove workflow

Result:

The required workflow was successfully added and configured for the selected issue types.

B. Add transitions and conditions.

Step 1: Edit the Workflow

1. Go to Space Settings → Workflows.
2. Locate your workflow.
3. Click Edit Workflow.

Why: The workflow must be edited to add new transitions and conditions.

Step 2: Add a Transition

1. In the workflow editor, click Add Transition.
2. The Create transition window will appear.

Why: A transition defines how an issue moves from one status to another.

[Update workflow](#) [Close](#) [...](#)

Create transition

Transitions connect statuses. They represent actions people take to move work items through your workflow. They also appear as drop zones when people move cards across your project's board.

To reuse a transition, edit the transition and select additional from statuses.

Required fields are marked with an asterisk *

From statuses * → To status *

Name *

Tip: Name your transition as an action people take to move an issue, like "start work" or "merge".

[Cancel](#) [Create](#)

Make work flow your way

Workflows represent your team's process and control how people progress your project's work.

Here, you can add statuses, which appear as drop zones for the cards on your project's board. You can create pathways between statuses called transitions, and automate repetitive actions using rules.

Select a status to reveal more details.

[Learn more](#)

Step 3: Select the From Status

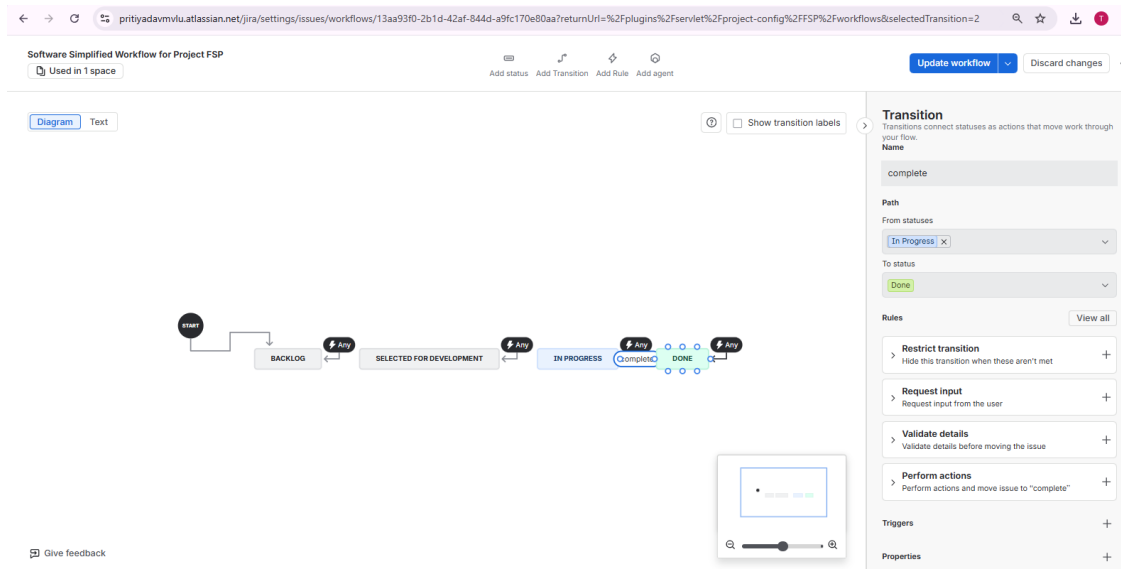

1. In From status, select the current/source status.
2. For example, select To Do.

Why: This specifies the status from which the issue will move.

Step 4: Select the To Status

1. In To status, select the destination status.
2. For example, select In Progress.
3. Enter a suitable transition name if required.

Why: The destination status specifies where the issue will move after the transition.

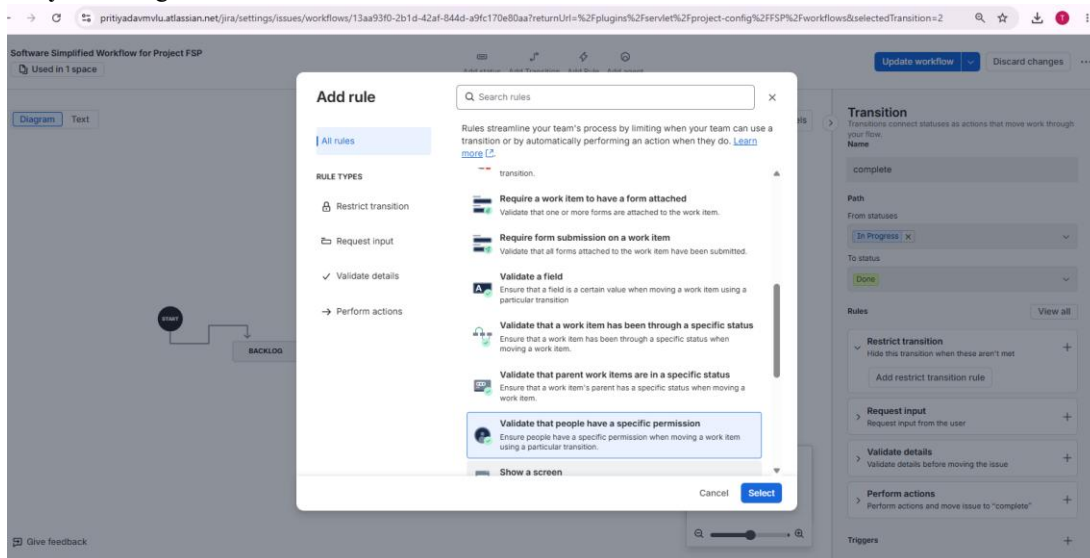

Step 5: Create the Transition

1. Check the selected From and To statuses.
2. Click Create.

The new transition will appear in the workflow diagram.

Why: Creating the transition establishes the movement between the two statuses.

Step 6: Add a Condition

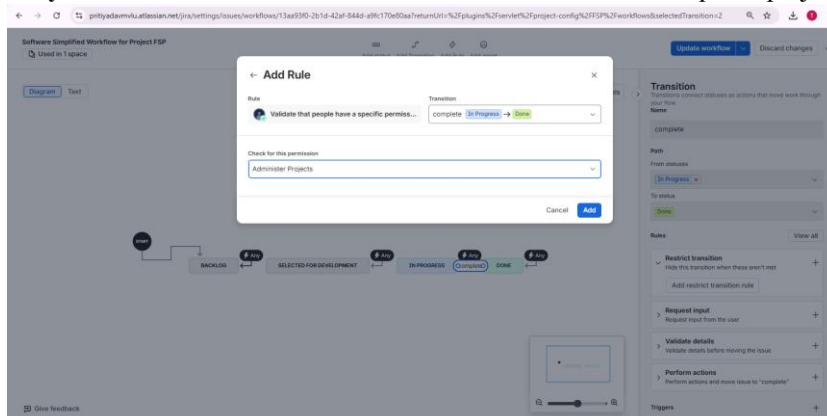

1. Select the newly created transition.
2. In the transition settings, find Conditions and Click Add rule.
3. Select Add condition / the appropriate condition option.

Why: A condition restricts who or when a transition can be performed.

Step 7: Select the Required Rule

1. Select the required condition/rule according to the requirement.
2. Click Select.
3. Enter the required condition details and Click Add.

Why: The selected rule ensures that the transition follows the required project conditions.

Step 8: Update the Workflow

1. After adding the transition and condition, click Update Workflow.
2. Wait for the workflow to be updated.

Why: Updating saves and applies the changes made to the workflow.

The screenshot displays the Jira workflow editor for a project named 'FSP'. The workflow diagram shows a sequence of statuses: START, BACKLOG, SELECTED FOR DEVELOPMENT, IN PROGRESS, and DONE. A transition from 'IN PROGRESS' to 'DONE' is highlighted with a blue circle. The right sidebar shows the 'Transition' configuration for 'complete', with 'From statuses' set to 'In Progress' and 'To status' set to 'Done'. Below this, the 'Rules' section shows 'Restrict transition' and 'Validate details' rules. The top navigation bar includes 'Update workflow' and 'Discard changes' buttons.

Result:

The required transition and condition were successfully added to the Jira workflow.

C. Publish and associate workflow with a project.

Step 1: Open Workflows

1. Go to Space Settings.
2. Click Workflows.
3. Locate the modified workflow.

Why: We need to access the modified workflow before publishing it.

Step 2: Publish the Workflow

1. Click Publish.
2. Review the changes if Jira displays a confirmation screen.
3. Confirm the publishing process.

Why: Publishing makes the customized workflow active and available for use.

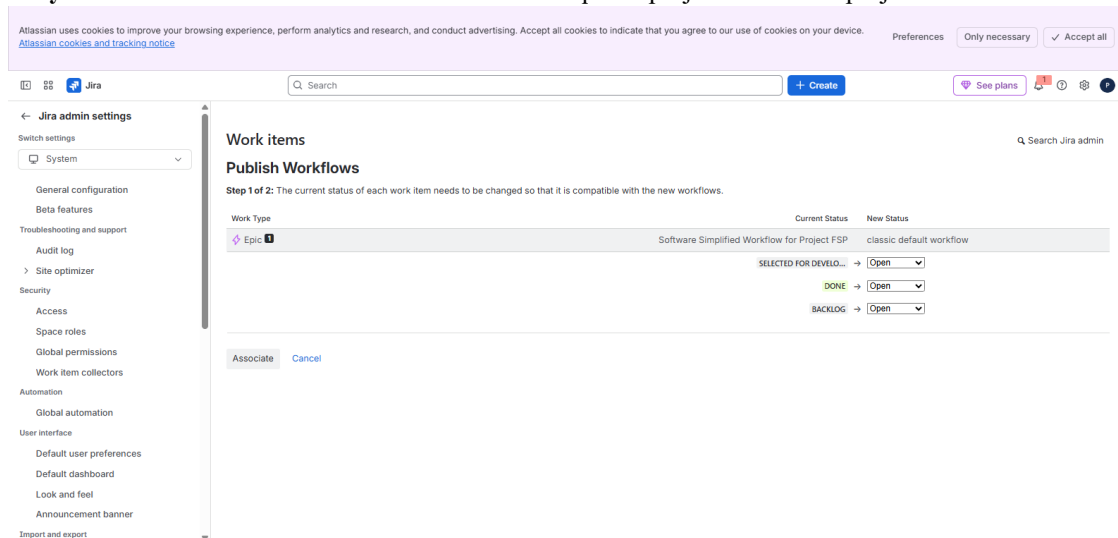

The screenshot shows the Jira 'Space settings' page for 'Full Stack Project'. The 'Workflows' tab is selected, displaying a list of workflows. The 'FSP: Software Simplified Workflow Scheme' is highlighted. The table lists work types (Story, Bug, Task, Sub-task, Epic) and their associated actions (Edit workflow, Remove workflow). A yellow banner at the top indicates that starting in September, workflow schemes will be limited to 150 workflows.

Step 3: Select Associate

1. After publishing, select Associate.
2. The Work items / Publish Workflows page will appear.

3. Select the required project/work items as shown in the practical.

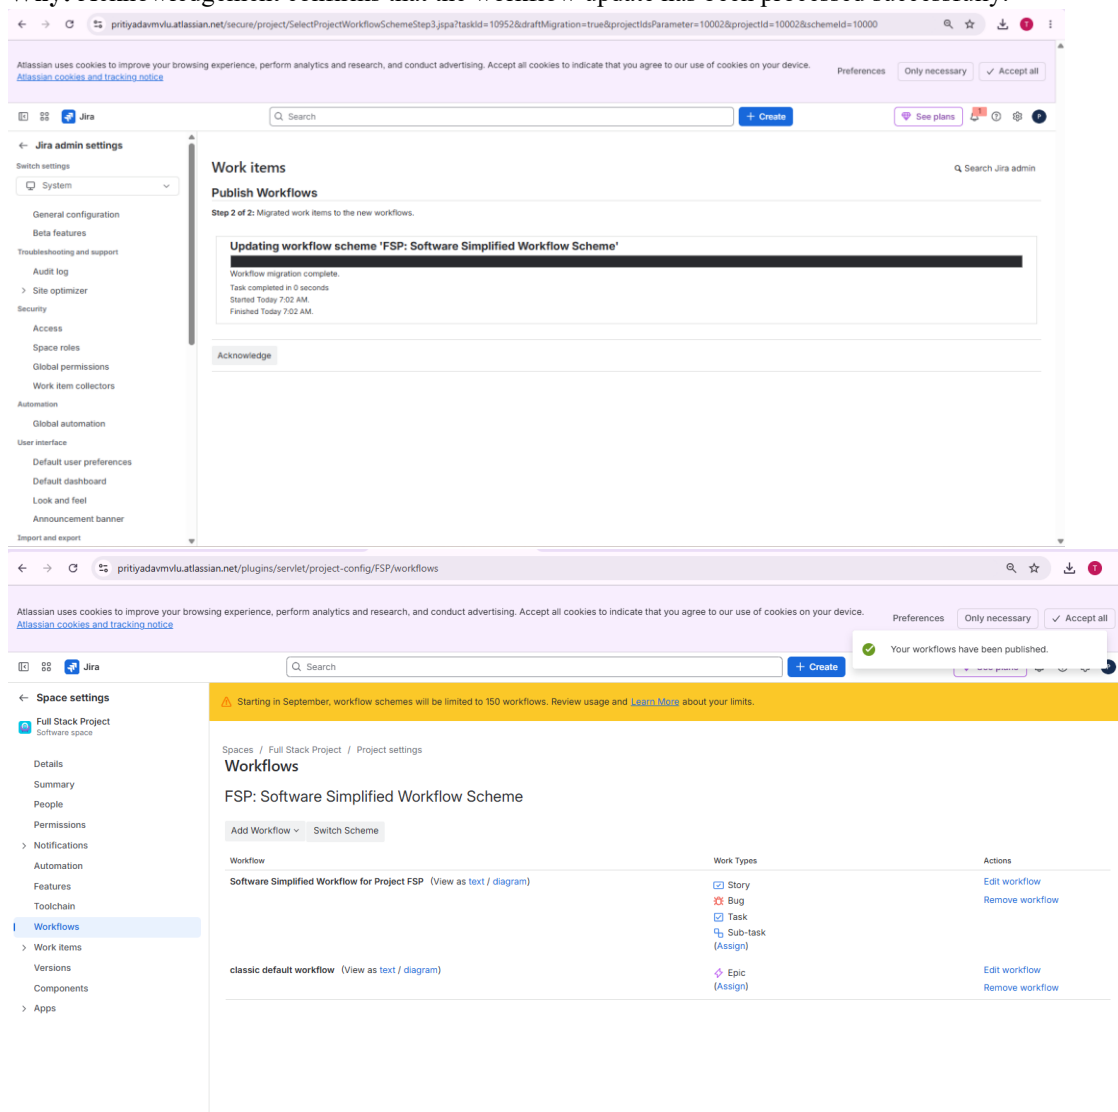

Why: Association connects the workflow with the required project so that the project's issues can use it.

Step 4: Confirm the Workflow Update

1. Jira will display that the workflow is being updated.
2. Click Acknowledge when the update is completed.

Why: Acknowledgement confirms that the workflow update has been processed successfully.

Result:

The customized workflow was successfully published and associated with the required project.

Conclusion:

Thus, a custom Jira workflow was designed, transitions and conditions were added, and the workflow was successfully published and associated with the project.
