

Prac 1 A Create a Jira Cloud account and explore the dashboard.

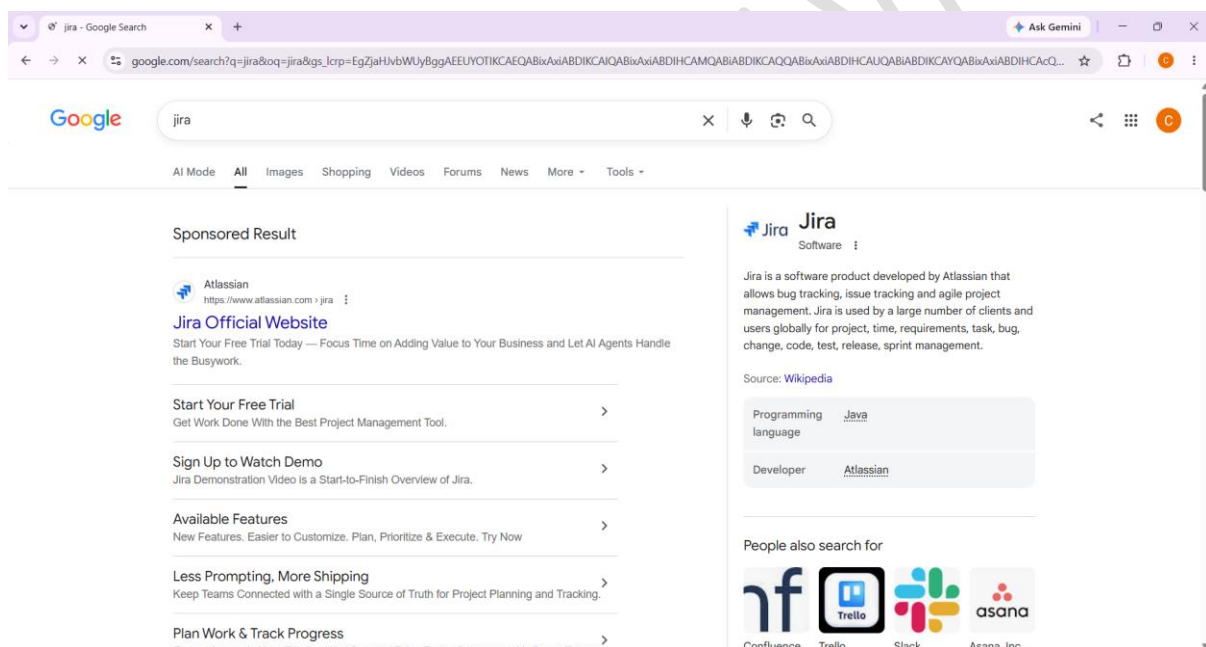

Jira is a project management and work-tracking tool used to organize and monitor project activities. It allows users to create projects, manage tasks, track their progress, and collaborate with team members.

Jira provides different options according to the type of work being performed. During the initial setup, the user selects the type of work, such as project management, so that Jira can provide suitable templates and features.

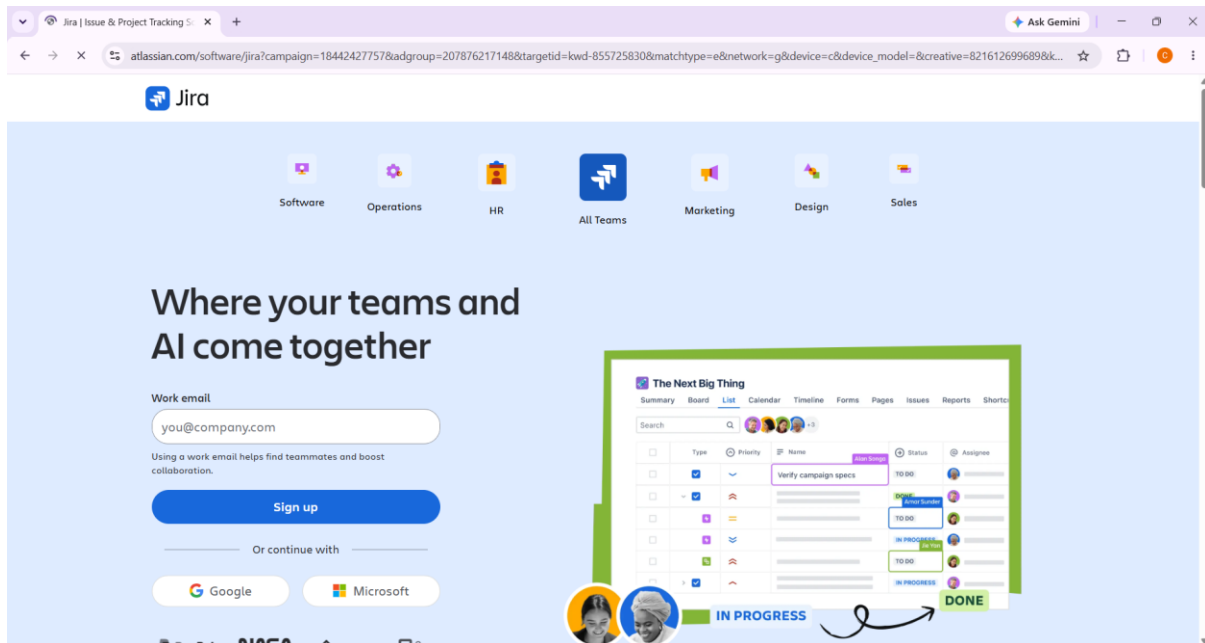

A project/space in Jira acts as a common workspace where related work is organized. It contains the tasks, boards, team members, and other project-related information.

Jira also provides a Dashboard, which gives users an overview of their work and provides access to their projects and other Jira features.

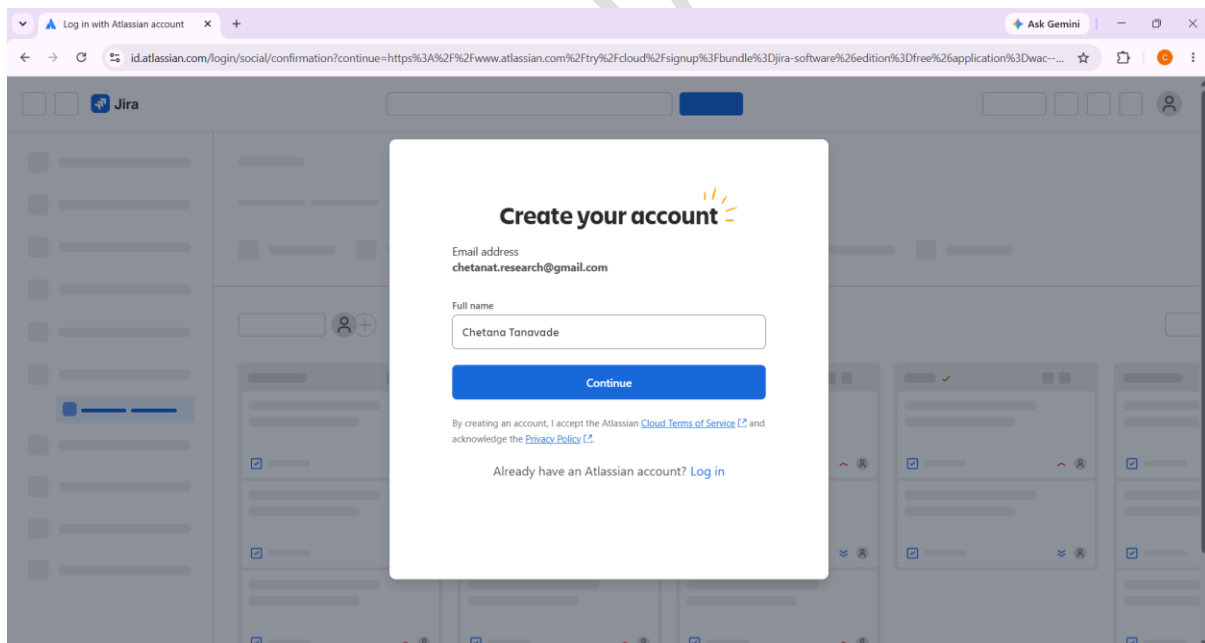

Open Google and search for Jira. Open the Jira website to begin the setup.

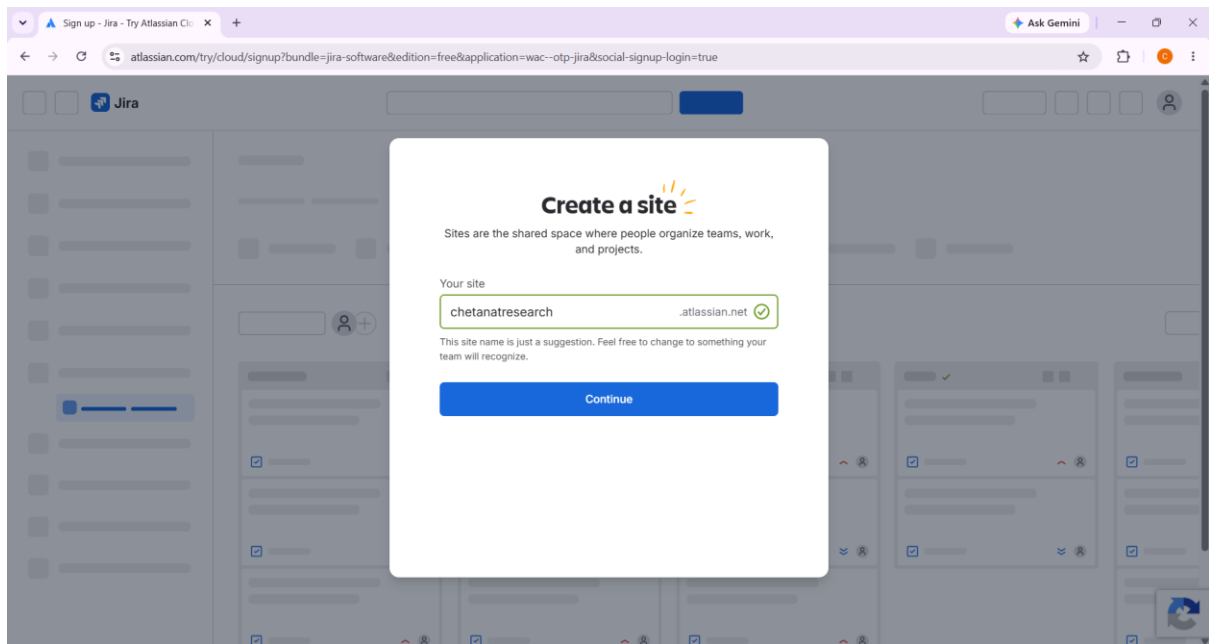

Click on Google. Enter the required email/account details and click Continue to create or access your Jira account.

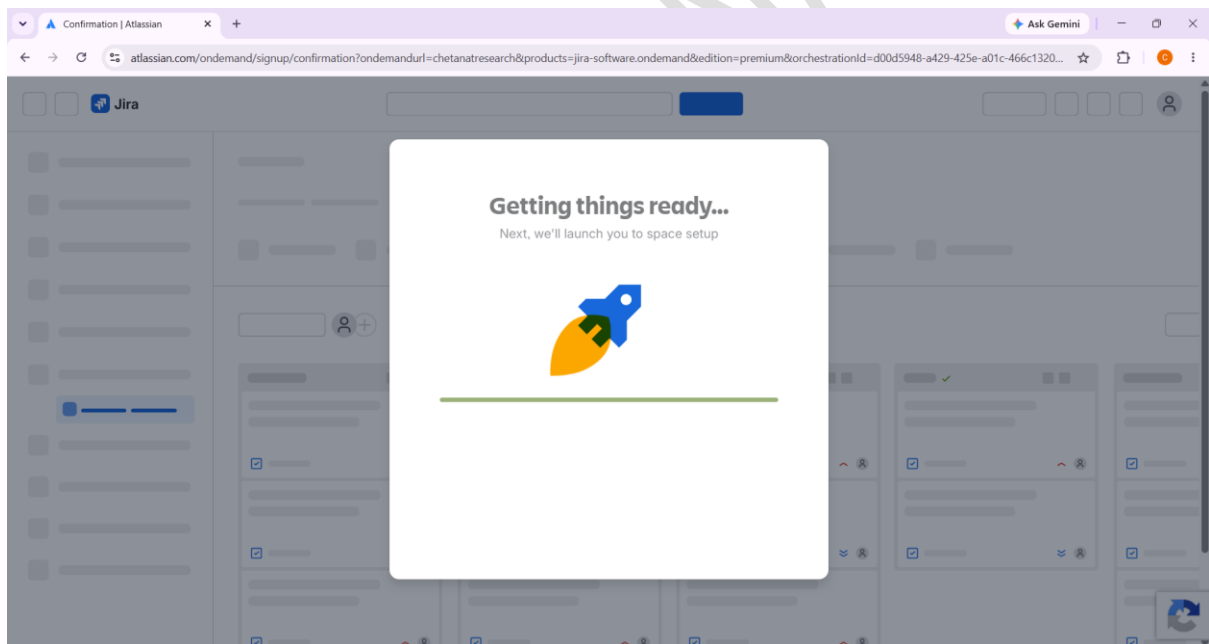

Complete the account creation process by following the instructions displayed on the screen.

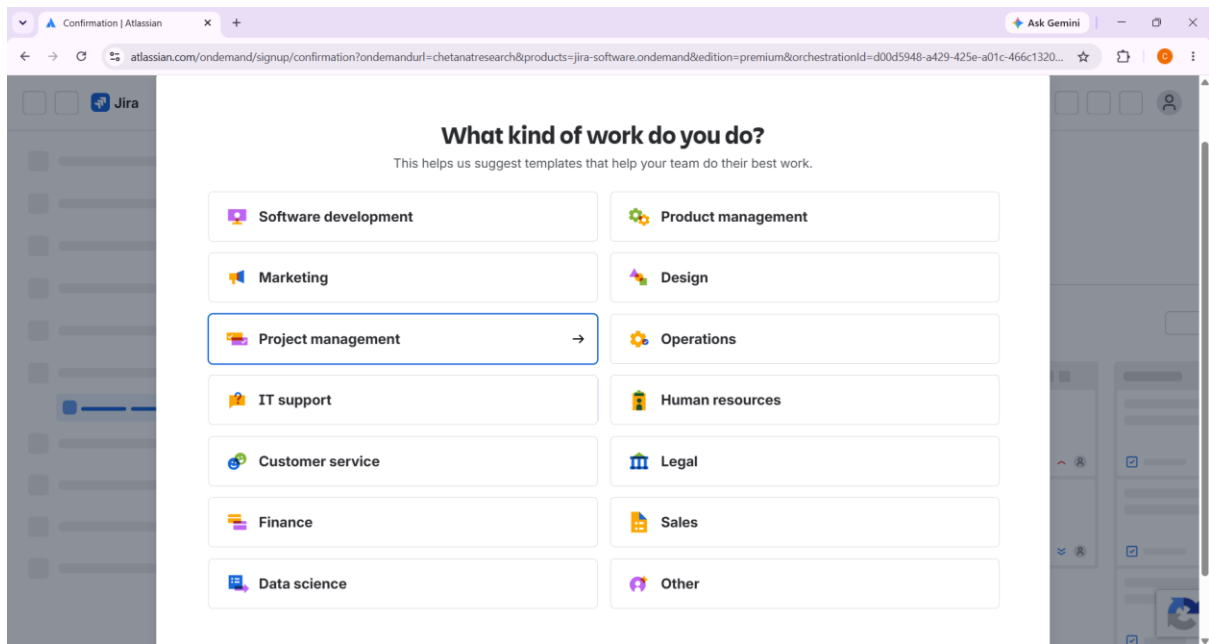

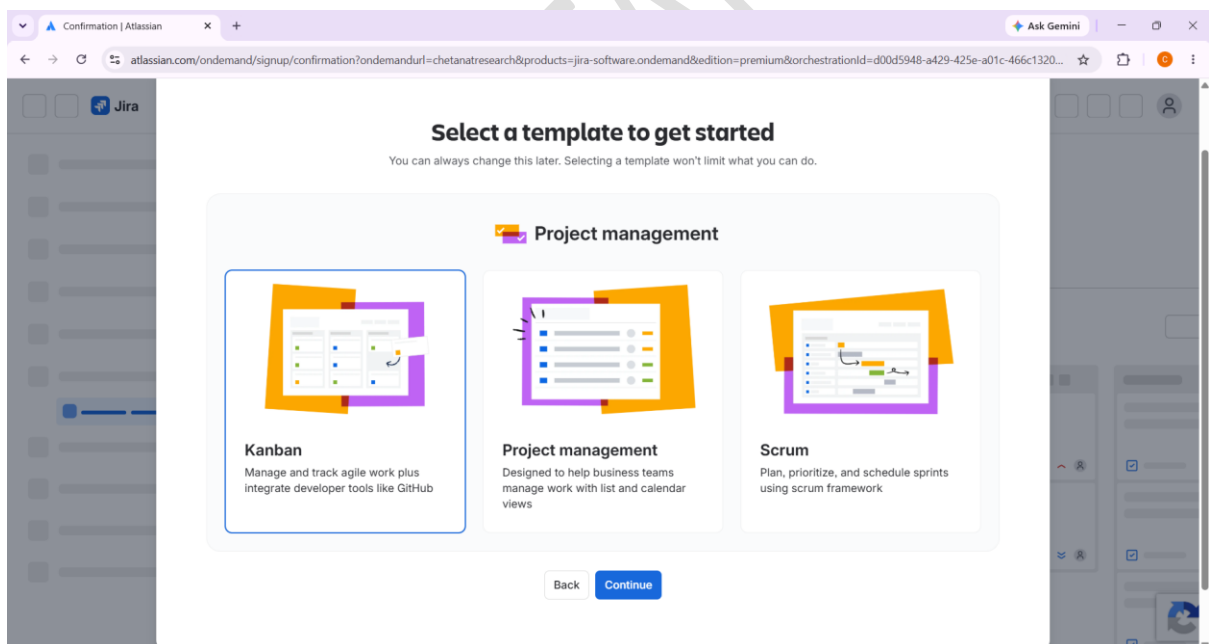

Wait for Jira to complete the initial setup. The Getting things ready screen will appear.

Select the type of work you want to manage. For this practical, select Project management.

From the available project-management templates, select the required template that is Kanban and click Next.

Enter a suitable name for your space/project in the Name your space field.

Name your space

This is where you'll help your team track progress, stay organized, and manage tasks.

Name your space

My Project Management Team

Example space names:

My Project Management Team Team Lyra

Milestone Hub Initiative Planning

Cross-Team Projects

Get started

Select the appropriate method for tracking your work and click Next.

How do you track work?

As you complete work, it moves through these statuses.

To Do X

In Progress X

In Review X

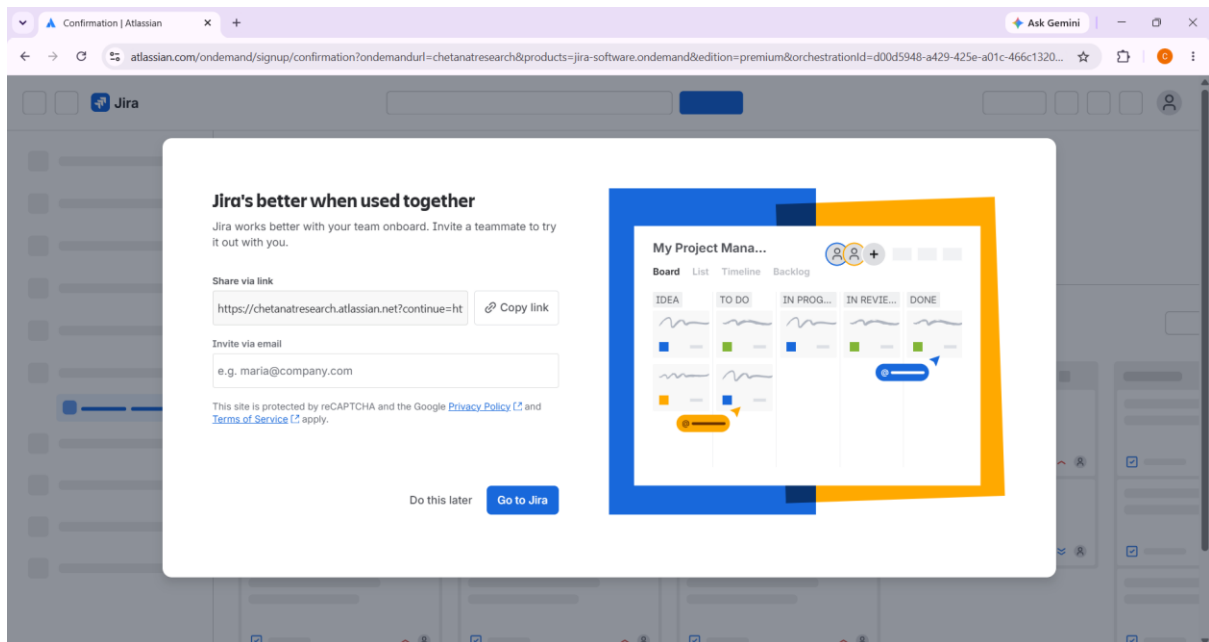

Done X

+ Add status

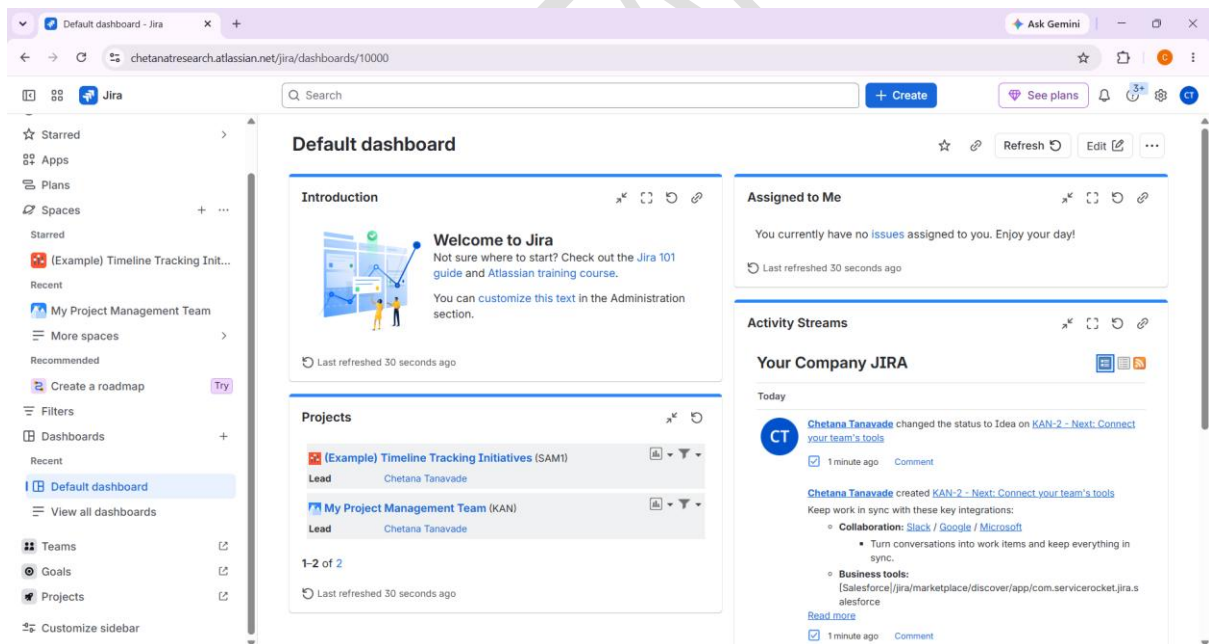

Next

After this select the type of work – click next.

Click on Go to Jira.

After completing the setup, the Jira Dashboard will appear. The dashboard provides access to your projects and work.

Practical 1B - Create a Company-managed Scrum/Kanban Project.

Kanban is a visual method of managing and tracking work. In Jira, a Kanban board represents work using cards and columns. Each card represents a task or work item.

The columns represent different stages of the work. A task can be moved from one column to another as its status changes.

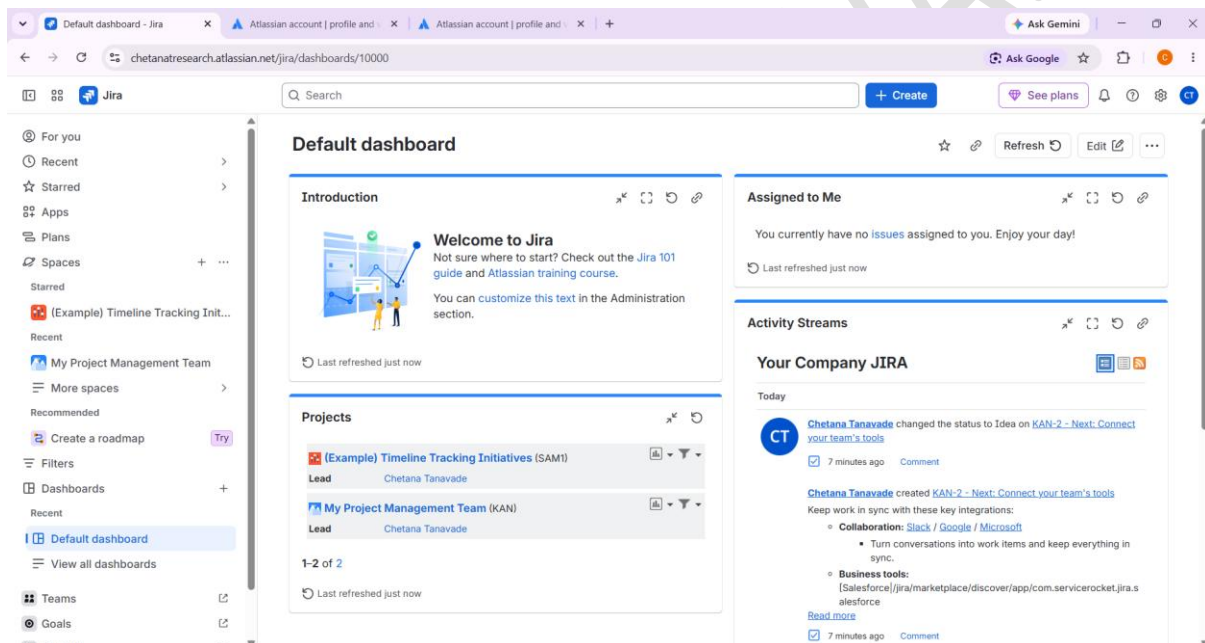

For example:

To Do → In Progress → Done

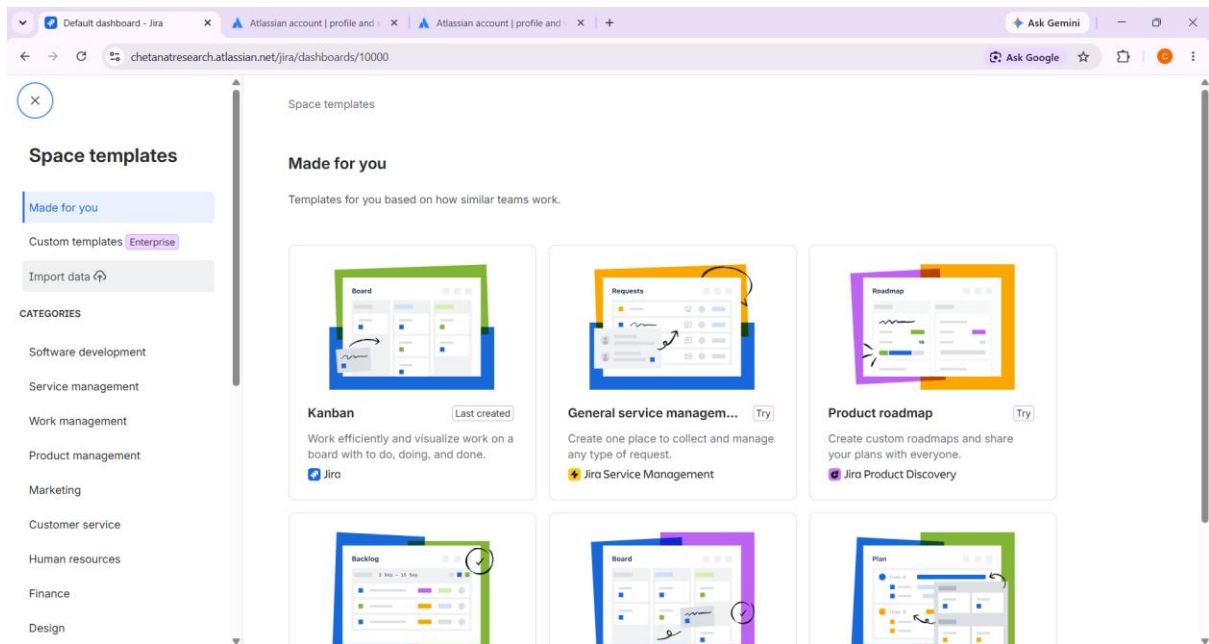

The Kanban template provides a ready-made structure for managing work instead of creating the complete workflow manually.

Jira also allows users to add team members to a space. This enables multiple people to participate in the same project and collaborate on its tasks.

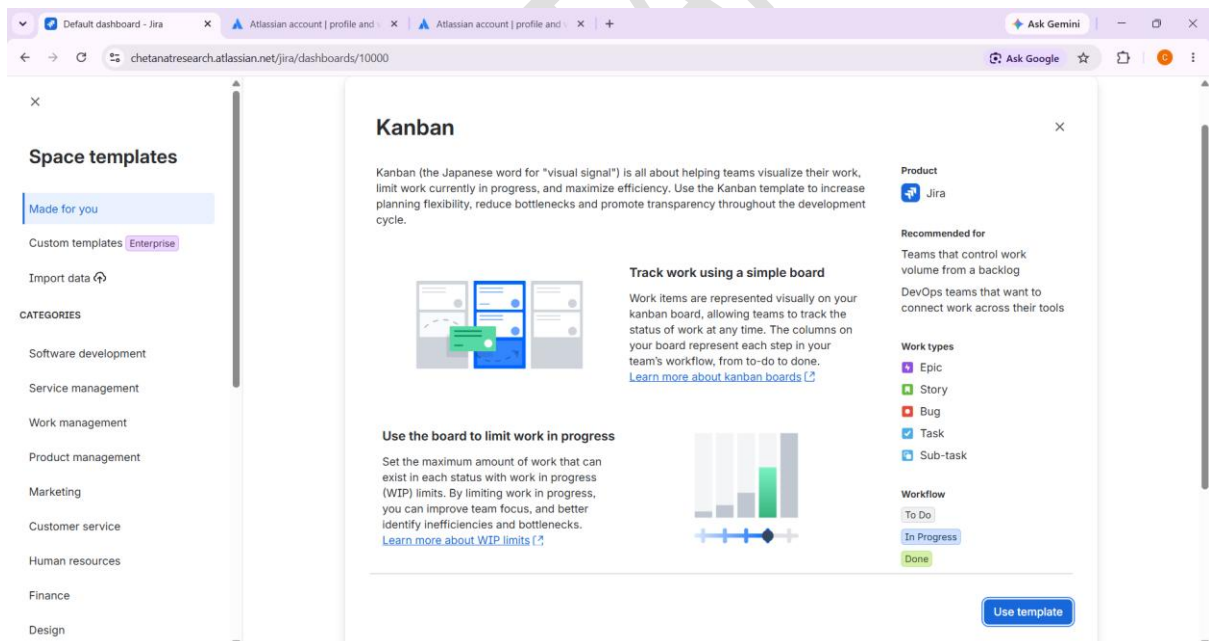

From the Jira navigation menu, click Spaces (+) to create or access a space.

Select the Kanban template to create a Kanban-based project.

Select Kanban and click on use template

Enter the required Space Name and provide the necessary details such as, select Company-managed in space managed option and then click next

← Back to templates

Name your space

TO DO IN PROGRESS DONE

After completing the setup, the Kanban Board will appear. The board can be used to create and track tasks through different stages.

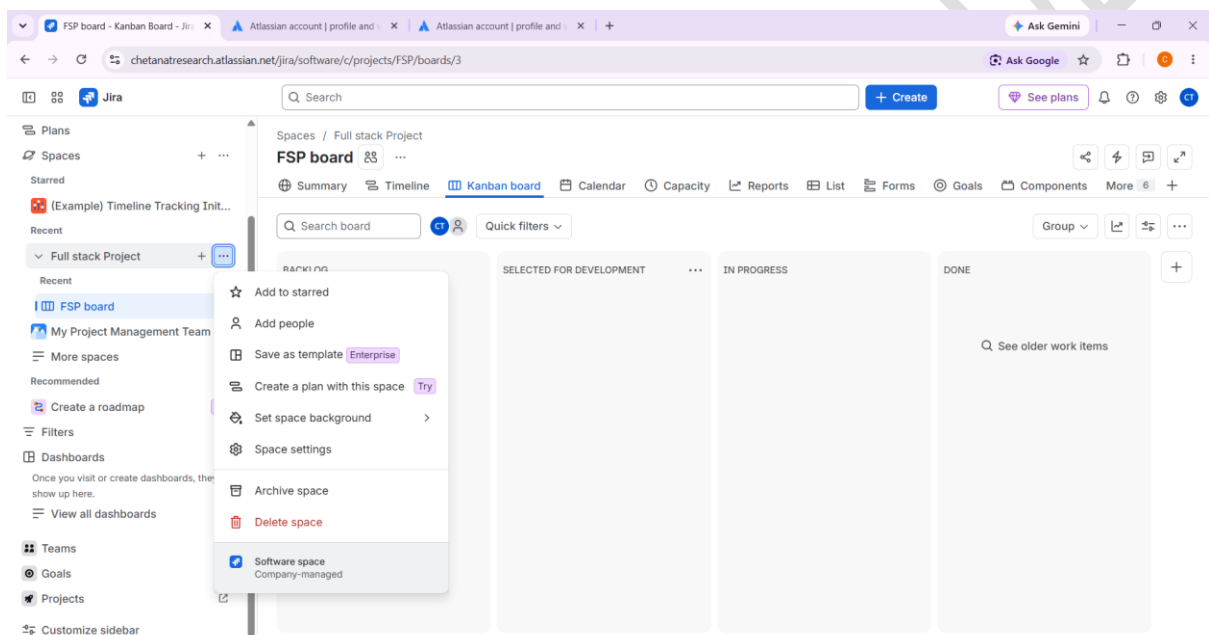

Prac 1C - Configure project details

Space Settings provides options for viewing and managing the configuration of a Jira space. After creating a space, users can open Space Settings to access information and configuration options related to that space.

The Details section provides basic information about the space. It helps users identify and understand the configuration of the created space.

Space settings are important because they provide a central location for managing different aspects of the project.

Open the created Jira space/project from the navigation menu.

Click Space settings to access and manage the configuration options of the Jira space.

The screenshot shows the Jira web interface. The browser tabs include 'Full stack Project - Details - Jira', 'Atlassian account | profile and ...', and 'Ask Gemini'. The address bar shows the URL 'chetanatresearch.atlassian.net/jira/software/projects/FSP/settings/details'. The Jira header has a search bar and a '+ Create' button. The left sidebar shows 'Space settings' with a list of options: Details, Summary, People, Permissions, Notifications, Automation, Features, Toolchain, Workflows, Work items, Versions, Components, and Apps. The main content area is titled 'Details' and shows the 'Full stack Project' space. It features a lifebuoy icon with a 'Change icon' button. Below this, there are input fields for 'Name' (containing 'Full stack Project'), 'Space key' (containing 'FSP'), and 'URL'. A note states 'Required fields are marked with an asterisk *'. At the bottom, it says 'How your space is managed' with a dropdown menu showing 'Jira - software project'.
